Argentina has reformed its public finance system and reversed years of economic decline and deficit spending. This study recommends policy options to speed the already impressive progress. These options would expand the ambitious reform program already under way. This study shows how to sustain balanced public finances over the medium term. It describes ways to sustain price stability and economic growth while providing a cushion against unexpected downturns. Also examined are ways to improve social services while reducing the size of government. Researchers discuss key reforms that could boost the fiscal surplus by as much as 1.4 percent of gross domestic product. They look at ways to build tax revenues, reduce provincial finances, and make social security more equitable. They review methods to cut defense spending and revise a moribund education system. Additional policy options offered are reforms for housing and welfare programs and pension fund investments. The study suggests ways to improve the legal framework for a stronger central bank. Also reviewed are ways to eliminate unnecessary administrative agencies and to privatize public enterprises. The government's new health insurance program is examined. This program offers universal coverage. It lets contributors choose providers and includes subsidies for those who can't pay. It also requires a minimum package of health care at a set price.

Lubricant Additives

Global report

Food quality is becoming an ever-increasing important feature for consumers and it is well known that some food crops are perishable and have a very short shelf and storage life. An effective quality assurance system throughout the handling steps between harvest and retail display is essential to provide a consistently good quality supply of fresh food crops to consumers and to protect the reputation of a given marketing label. Food manufacturing companies all over the world are increasingly focussing on quality aspect of food including minimally processed food to meet consumer demands for fresh-like and healthy food products. To investigate and control quality, one must be able to measure quality-related attributes. Quality of produce encompasses sensory attributes, nutritive values, chemical constituents, mechanical properties, functional properties and defects. Successful postharvest handling of crops requires careful coordination and integration of the various steps from harvest operations to consumer level in order to maintain the initial product quality. Maturity at harvest

one feature of quality of perishable products, it has great influence on their postharvest behavior during marketing. Safety assurance can be part of quality assurance and its focus on minimizing chemical and microbial contamination during production, harvesting, and postharvest handling of intact and fresh-cut of commodities. Essentially, electromagnetic (often optical) properties relate to appearance, mechanical properties to texture, and chemical properties to flavor (taste and aroma).
