This **Teacher's Book** is the companion to **Academic Presenting and Presentations** (ISBN 978-3-7347-8367-8), a training course designed to help students cultivate academic presentation skills and deal with the various presentation tasks they may be required to fulfill during the course of their university studies. The material is suitable for a global audience and can be used in a wide range of contexts in the fields of Communication Skills, English Language Teaching and English for Academic Purposes. In addition to providing valuable notes on each unit, the **Teacher's Book** contains key information on the underlying principles, concept and structure of the course and sets out the rationale behind its design. Teachers, and through them their students, can benefit from the depth of the insights presented here, making the classroom experience a rewarding and enjoyable one. Academic presentations can be particularly challenging for non-native English speakers and consequently, the print material and the accompanying video recordings dovetail neatly to provide linguistic support and guidance as well as enhancing presentation skills and providing a forum for practice, feedback and ongoing improvement. However, broader topics of interest appropriate to a study-oriented context, such as research and plagiarism, are also dealt with in a unique balance of content that goes beyond the treatment of discrete language points and emphasises high-level task achievement whilst at the same time focusing attention on the specific requirements of addressing an audience in an academic environment.

*"Was liest du gerade?" So beginnt das Gespräch zwischen Will Schwalbe und seiner Mutter Mary Anne. Sie ist todkrank, doch anstatt zu verzweifeln, widmet sie sich ihrer großen Leidenschaft, dem Lesen. Über ein Jahr begleitet Will seine Mutter bis zum Ende ihres Lebens – und durch eine Welt von Büchern, die sie gemeinsam erkunden: Joseph und seine Brüder, Die Eleganz des Igelis, Der Vorleser ... Am Ende erkennt Will: Lesen ist nicht das Gegenteil von Handeln – es ist das Gegenteil von Sterben. Will Schwalbe erzählt die Geschichte jenes Jahres. Er erzählt von den Büchern, die ihrer beider Leben geprägt haben. Und er erzählt von Trauer, Angst und dem Erkenntnis, dass das Glück ganz unerwartet aus dem Moment heraus entsteht.*

*Nach dem Tod ihres Vaters will Julie Jacobson nur noch eins: raus aus der Tristesse ihres provinziellen Zuhauses. Das Sommercamp an der Ostküste eröffnet ihr eine neue Welt. Eine Welt der Kunst, Kreativität und Freiheit, verkörpert durch die interessantesten Menschen, denen sie je begegnet ist: Ethan, Jonah, Cathy, Ash und Goodman, fünf junge New Yorker, die Julie ihrer Schlagfertigkeit und ihres schwarzen Humors wegen in ihre privilegierte Clique aufnehmen. Die Jahre und Jahrzehnte vergehen, aber nicht jeder der »Interessanten«, wie sie sich selbst halb ironisch nennen, kann aus seinen Begabungen das machen, was er sich als Jugendlicher erträumte. Was bestimmt das Leben – Talent, Glück oder das Resultat der eigenen Entschlossenheit? Meg Wolitzer zeigt an ihren Figuren die Tragik und Komik des Daseins und erzählt davon, wie es sich anfühlt, wenn man plötzlich versteht – vielleicht zu spät –, wer man einmal war und wer man geworden ist. »Die Interessanten« ist ein großer Gesellschafts- und Ideenroman über das Wesen der Kunst und der Freundschaft vor dem Panorama der USA in den letzten vierzig Jahren.*

This book contains selected peer-reviewed articles that cover novel information on epileptic seizure and psychogenic non-epileptic seizures written by international researchers. In this book, we discuss self-reporting technologies for supporting epilepsy treatment. We also discuss about the diagnostic testing in epilepsy genetic clinical practice. Clinical aspects related to diagnosis in patients presenting psychogenic non-epileptic seizures vs. epileptic seizures and neurocysticercosis are discussed as well. We delivered novel aspects about the treatment for pseudoseizures. In another chapter, the authors estimated the prevalence of ischemic stroke in epileptic patients presenting subarachnoid neurocysticercosis and ischemic stroke frequency among HIV-positive patients, and finally other authors discuss autoimmune epilepsy, its new development, and its future directions. We are looking forward with confidence and pride to the remarkable role that this book will play for a new vision and mission.

This is the first comprehensive history of human-computer interaction (HCI). Whether you are a user experience professional or an academic researcher, whether you identify with computer science, human factors, information systems, information science, design, or communication, you can discover how your experiences fit into the expanding field of HCI. You can determine where to look for relevant information in other fields—and where you won't find it. This book describes the different fields that have participated in improving our digital tools. It is organized chronologically, describing major developments across fields in each period. Computer use has changed radically, but many underlying forces are constant. Technology has changed rapidly, human nature very little. An irresistible force meets an immovable object. The exponential rate of technological change gives us little time to react before technology moves on. Patterns and trajectories described in this book provide your best chance to anticipate what could come next. We have reached a turning point. Tools that we built for ourselves to use are increasingly influencing how we use them, in ways that are planned and sometimes unplanned. The book ends with issues worthy of consideration as we explore the new world that we and our digital partners are shaping.

The Publishers Weekly

**The hypermedia authoring process has been vividly described in a special issue of the Economist as a combination of writing a book, a play, a film, and a radio or television show: A hypermedia document combines all these elements and adds some of its own. The author's first job is to structure and explain all of the information. The author then must distill the information into brief, descriptive nodes. Each node has to contain a list of the ingredients, and instructions on how the ingredients are mixed together to the greatest advantage. The structure of the material provided is translated into an architectural metaphor of some kind; much of the designer's work is the creation of this imaginary space. Then, the designers must chart the details of what to animate, what to film, who to inter view, and how to arrange the information in the space to be built [Eco95a]. This book presents guidelines, tools, and techniques for prospective authors such that they can design better hypermedia documents and applications. It surveys the different techniques used to organize, search, and structure information in a large information system. It then describes the algorithms used to locate, reorganize, and link data to enable navigation and retrieval. It looks in detail at the creation and presentation of certain types of visual information, namely algorithm animations. It introduces new mechanisms for editing audio and video data streams.**
