

Manufacturing Operations Strategy: Texts And Cases

The preceding process of globalization and the continuously rising competitive pressure on manufacturing companies in more developed economies unveiled the limits of classical site-focused optimization approaches. The focus of network optimization shifts ever more towards an integrative view of manufacturing networks, striving for a harmonization of the strategy-, configuration- and coordination levels. This book presents such an integrative approach to the strategic management of manufacturing networks. Besides strategic network requirements, this book discusses the derivation of an optimal global footprint and the optimization of network coordination activities. Special attention is paid to the site roles concept, especially to the concept of 'lead factory'. A large number of up-to-date cases from the producing industry enrich the book and provide the reader with vivid examples for the application of the presented concepts. Hence, this book is a must-read for both practitioners and academic researchers.

Manufacturing and Operations Strategy

For close to 20 years, [Industrial Engineering and Production Management] has been a successful text for students of Mechanical, Production and Industrial Engineering while also being equally helpful for students of other courses including Management. Divided in 5 parts and 52 chapters, the text combines theory with examples to provide in-depth coverage of the subject.

Most manufacturers are good enough at many aspects of their business, but surprisingly few are excellent at what matters most. In fact, all manufacturers can still do better at their most critical competencies. How can your company improve and grow? Start Smart, Finish Strong helps you answer that question-and then gives you practical ways to achieve true transformation at your company. For over 25 years, Rebecca Morgan has helped manufacturers leverage their resources to be more successful. Along the way, she has discovered the behaviors, capabilities, and best practices that drive excellence in manufacturing. In this landmark book, Morgan shares 58 powerful strategies to help any manufacturer dramatically improve. Follow Morgan's expert advice-on everything from effective leadership to supply chain management-and you'll forge your own path to operational excellence and long-term success. This practical guide to manufacturing offers key insights about how to: -Develop an effective leadership strategy and strong strategic vision -Achieve operational excellence and implement lean manufacturing -Master your supply chain and create a problem-solving culture -Harness the power of data and embrace new technologies -Define a powerful competitive advantage and plan for the future

To stay competitive and meet market expectations in a global economy, both domestic and foreign companies must realign their manufacturing processes, make improvements, and increase their manufacturing capabilities. With large numbers of employees working in a network of domestic and foreign facilities, production processes are as varied as the products being produced. Manufacturing managers need a manufacturing plan or strategy that will bring structure to this complex environment. In Manufacturing Strategy: How to Formulate and Implement a Winning Plan, 2nd Edition, John Millenburg offers a sensible and systematic method to: (1) evaluate domestic and foreign factories and international manufacturing and (2) plan the appropriate manufacturing strategy to be first in the market. Incorporating comments and suggestions from managers who used the first edition of Manufacturing Strategy, John Millenburg expands and improves on his focus in the areas of: International Manufacturing – where the focus is on a company's international network of factories; Competitive Strategy – where managers must understand the role manufacturing strategy plays in their company's business strategy; and Manufacturing Programs – showing how programs such as quality management, six sigma, agile manufacturing, and supply chain management fit within the manufacturing strategy. Manufacturing Strategy gives managers a common language for dealing with manufacturing problems at both strategic and operational levels. It improves communication between manufacturing managers and those outside manufacturing (who will now have a better understanding of what manufacturing can and cannot do).

Highly practical in focus, this volume proceeds from broad discussions of operations strategy, to assessments of specific strategies (competing on quality, productivity, and new products and processes), to discussions of how those strategies can best be implemented over time.

This book assesses the state of international manufacturing strategy and clarifies how recent developments, for example regarding configuration, technology, and the environment, are impacting on its content and direction and on its relationship to manufacturing performance. In providing up-to-date coverage of the consequences of such forces and factors for international manufacturing, this book aims to expand the debate concerning international manufacturing strategy and cast light on its current evolution. International manufacturing is operating within a time of great flux. While offshoring of activities has dominated over recent decades, nearshoring and reshoring are increasingly being considered and observed in practice. At the same time, technologies such as 3D-printing are gaining traction and the role of ICT and data analytics is increasingly important in the international manufacturing landscape while digitization becomes more prevalent and the embrace of the Internet of Things (IOT) accelerates. Furthermore, issues related to the environment are figuring more prominently in international manufacturing considerations, and assumptions

regarding the long-term cost of energy are being called into question. International manufacturing is also experiencing greater servitization. Scholarly Essay from the year 2011 in the subject Business economics - Business Management, Corporate Governance, grade: -, The University of Surrey (School of Management), course: Production and Operations Management, language: English, comment: Production and Operations Management Operation Strategy Comparison and contrast of the operations strategy of two 'manufacturing firms' with two 'service' firms Companies studied: Dell / Zara / McDonalds / Lufthansa by B. Baum School of Management University of Surrey, abstract: INTRODUCTION: The purpose of this paper is to compare and contrast the operations strategy of two 'manufacturing firms' with two 'service' firms and to evaluate the order qualifying and order winning criteria. Operations strategy is one part of an enterprise's overall strategy (corporate strategy, business strategy and operational strategy) and defines the enterprise adjustment concerning "core competencies, capabi processes, technologies, resources and key tactical activities necessary in any supply network, in order to create and deliver products or services and the value demanded by a customer" (Lovson, 2001). CONCLUSION: The analysis of two manufacturing (Dell, Zara) and two service firms (Lufthansa, McDonalds) shows the correspondence between the theoretical approach of operations management and current practice. Each company has a whole enterprise strategy that includes operations strategy. Each industry has different order qualifiers, but no company analyzed was able to be the best in all qualifiers, which supports the theoretical conclusion that fulfilling all objectives simultaneously, is impossible (Skinner, 1969). This book concentrates on the strategic role and importance of production / operations, enabling the firm to be competitive in global markets. The first chapter, on strategic issues, provides an important framework for the rest of the book. Human resource management and new product development are given chapters of their own, and the chapter on manufacturing strategy provides an exhaustive discussion of key areas. Endorsements "There is no single text that I can think of so soundly written on the subject as this one. The perspective is clearly based on 20/20 vision, the toolkit is knowledgeably and freshly laid out and the supporting evidence described by a person obviously and freshly laid out and the supporting evidence described by a person obviously master of his subject." Dr Tom Mullen, Strathclyde Graduate Business School, University of Strathclyde "A timely book which is a step ahead of competing texts by demanding proper consideration be to production and human resource operations in the top planners' inner sanctum. This text demonstrates how to achieve competitive and desired results. Strategy and tactics are rarely so thoroughly examined in a way to help the manager and employer alike to meet the new global challenge of the 21st century." Dr Manton C Gibbs, Professor of Strategic Studies, International Journal of Commerce and Management

While many business schools are teaching Global Operations Strategy with self-made teaching materials, there are no such textbooks. Combining practical approaches with detailed theoretical underpinnings, this book provides theories, tools, frameworks, and techniques for global operations strategy, and brings real world perspectives to students and managers. Each chapter includes definition of key terms, introduction of fundamental theories, several short case examples, one lo

new case to explain the associated theories, and recommended further reading.
