A big, inside look at the shocking lack of regulation within the pet food industry, and how readers can dramatically improve the quality of their dogs' lives through diet. What's really going into commercial dog food? The answer is horrifying. Big Kibble is a \$75 billion globally. A handful of multi-national corporations dominate the industry and together own as many as 80% of all brands. This comes as a surprise to most people, but what's even more shocking is how lax the regulations and guidelines are around these products. The guidelines—or lack thereof—for pet food allow producers to include ever-cheaper ingredients, and create ever-larger earnings. For example, "legal" ingredients in kibble include poultry feces, saw dust, expired food, and diseased meat, among other horrors. Many vets still don't know that kibble is not the best food for dogs because Big Kibble funds the nutrition research. So far, these corporations have been able to cut corners and still market and promote feed-grade food as if it were healthful and beneficial—until now. Just as you are what you eat, so is your dog. Once you stop feeding your dog the junk that's in kibble or cans, you have taken the first steps to improving your dog's health, behavior and happiness. You know the unsavory side of Big Tobacco and Big Pharma. Now Shawn Buckley, Dr. Oscar Chavez, and Wendy Paris explain all you need to know about unsavory Big Kibble—and offer a brighter path forward for you and your pet.

From Alexandra Horowitz, #1 New York Times bestselling author of Inside of a Dog, an eye-opening, informative, and wholly entertaining examination and celebration of the human-canine relationship for the curious dog owner and science-lover alike. We keep dogs and are kept by them. We love dogs and (we assume) we are loved by them. We buy them sweaters, toys, shoes; we are concerned with their social lives, their food, and their health. The story of humans and dogs is thousands of years old but is far from understood. In Our Dogs, Ourselves, Alexandra Horowitz explores all aspects of this unique and complex interspecies pairing. As Horowitz considers the current culture of dogdom, she reveals the odd, surprising, and contradictory ways we live with dogs. We celebrate their individuality but breed them for sameness. Despite our deep emotional relationships with dogs, legally they are property to be bought, sold, abandoned, or euthanized as we wish. Even the way we speak to our dogs is at once perplexing and delightful. In thirteen thoughtful and charming chapters, Our Dogs, Ourselves affirms our profound affection for this most charismatic of animals—and opens our eyes to the companions at our sides as never before.

The purpose of Picking a Pedigree is to raise public awareness of what constitutes a healthy pet, to inform what the medical implications of inherited features are, and describe the human-influenced breeding practices that have created manufactured problems for the sake of appearance and arbitrary breed standards. Picking a Pedigree is a book that all responsible prospective pet owners should read before making a decision on acquiring a new puppy or kitten.

With the increasing availability of MRI technology, there is also a pressing need for expertise in interpreting these images. This is the first reference textbook to provide a well-illustrated and comprehensive overview of the current knowledge, focusing on imaging appearance rather than on clinical signs or treatment. With chapters on MRI physics and technology as well as sections on specific anatomical regions, the book functions as a stand-alone reference for the reader, whether they be a radiology/neurology resident in training or a

The chapters on physics and MRI technology are concise and accessible, using many visual aids and diagrams, and avoiding abstract concepts and equations whenever possible. Within each anatomical section, each chapter focuses on a disease category of that body region. Health and welfare issues of brachycephalic (flat-faced) animals are one of the most pressing problems facing companion animals right now. Dogs, in particular, are suffering from a 'brachycephalic crisis' resulting from a perfect storm where predispositions to an array of health issues are amplified by a population boom for certain brachycephalic breeds such as the French Bulldog and Pug. But yet, for many owners, these dogs represent the perfect companion: endearing personas and cute looks in a socially desirable package. So where is the truth in all of this? This book will equip veterinary professionals, animal welfare scientists, breeders and owners with the fuller story about brachycephalic health and welfare. The first half of the book provides the context of how and why we are in this crisis, offering in-depth historical, social, ethical, communication, nursing, welfare, epidemiological, genetics and international perspectives. The second half shifts towards the clinical arena, with chapters that cover the background, diagnosis, treatment and prevention of the many unique healthcare needs of brachycephalic animals. Cutting-edge knowledge is shared on a range of disciplines including respiratory disease, ophthalmology, dermatology, dentistry, neurology, obesity, reproduction and anesthesia. With twenty chapters written by world-leading experts, lifetimes of experience and knowledge are condensed into the first book dedicated exclusively to brachycephaly in companion animals. Domestic animals are an integral component of human leisure experience and can enhance the physical, social, and mental wellbeing of humans. The interplay of human and animal experiences of justice, wellbeing, rights, and roles within leisure is the central theme of this book. Research explores the position of domesticated animals in human leisure experiences, in a wide array of leisure settings. Chapters question whether domestic animals may have a desire for leisure that is different from human leisure, whether animals have and wish to fulfil needs for meaningful leisure or non-leisure, and whether human leisure needs and desires may coincide or contradict wellbeing interests of animals.

This book provides a venue for the dissemination and exploration of research, which champions the welfare and rights of these animals to have their needs and interests in leisure recognised. It moves the debate about animals in leisure beyond the current limits which have seen research mainly confined to the exotic 'other' rather than more mundane, everyday domestic animals. This book will be of interest to individuals in the fields of tourism ethics, zoology, animal behaviour, and leisure studies.

The World Almanac and Book of Facts 2018

This book brings together authoritative information about the child/dog bond as it is manifested with family dogs, visiting therapy dogs, and service dogs trained to assist children with disabilities. Despite the widely accepted view that participating in a dog's care and interacting with dogs in behaviorally healthy ways is a route to becoming responsible and compassionate, research on this complex dynamic is difficult to design, time-consuming to collect, and challenging to analyze. This volume synthesizes theory, research, and practice, bringing all to bear upon child/dog interactions in homes, schools, libraries, and the community at large. Children, Dogs and Education serves as a handbook for a diverse group of adults who seek to build positive relationships between children and dogs—parents/families, professional dog trainers, teachers, librarians, mental health professionals, health care professionals, and university faculty. The study of interactions between human and nonhuman animals has captured the imagination of an international community of researchers from many different fields and professions. Even though dogs are ubiquitous in the lives of most children, studies of children's interactions with dogs in families and communities are lacking. Most of the previous research on the human-canine bond has focused on adolescents and adults or, even when younger children are the focus, it has tended to rely on parents to speak for children. There are three features of this book that make it unique. First, it goes beyond exploring the child/dog bond to examine additional important issues, including: children's concepts of responsible care, their ability to interpret dogs' behavioral cues, and their ideas about canine behavioral issues/training. Second, unlike most other work to date, it represents children's voices through cases, interviews, and drawings. Finally, the contributors to this edited work use their collective wisdom to draw educational implications and suggest direction in preparing the next generation of dog guardians.
