Craig Detweiler's collection of up-to-the-minute essays on video games' theological themes (and yes, they do exist!) is an engaging and provocative book for gamers, parents, pastors, media scholars, and theologians--virtually anyone who has dared to consider the ramifications of modern society's obsession with video games and online media. Together, these essays take on an exploding genre in popular culture and interpret it through a refreshing and enlightening philosophical lens.

This reference work tells the unique history of Christian education and shows how Christian educators pioneered such institutions and reforms as universal literacy, home schooling, Sunday schools, women's education, graded schools, compulsory education of the deaf and blind, and kindergarten. This volume engages with the relative absence and underrepresentation of female voices in the field of science and religion, which tends to be dominated by male academics

who are in the later stages of their careers. It makes a valuable contribution to correcting this imbalance by showcasing the work of a talented set of rising female scholars, which is not necessarily explicitly feminist in content or approach. All the authors featured are at a relatively early stage in their careers with diverse backgrounds and interests. Engaging with traditional and new questions, they promise to contribute much to the future development of the field of science and religion.

Contrasting two Protestant justices who hold distinctively different worldviews, Chief Justice William H. Rehnquist and Justice Harry A. Blackmun, this book explores how each came to hold his worldview, how each applied it in Supreme Court rulings, and how it led them to differing outcomes for liberty, equality, and justice. This clash of worldviews between Rehnquist, whose religious and philosophical influences were anchored in the Reformation, and Blackmun, whose Reformation theology was modified by Enlightenment philosophy, provide the context to examine the true nature of

justice, liberty, and equality and to consider how such ideals can be maintained in a society with increasingly divergent worldviews.

Creation and evolution are compatible, not contradictory. Integration of the two concepts requires only that we relax the man-conceived measurement of time. Evolution is a tool God uses through time to create the universe and all in it. The Evolution of Creation helps children worldwide understand how science and religion go hand-in-hand. Parents, grandparents, teachers and others will embrace this unique book to educate young minds about how evolution theory and the creation story work in harmony. The book also helps adults clarify their own thinking. The Evolution of Creation is intended primarily for pre-school and elementary school age

levels. With few words and beautiful illustrations, the book invites children and adults to think critically together about the traditional questions of "Where did we come from?" and "How did we get here?"

All Christian colleges and universities hail the integration of faith and learning as a premier mission objective. There is less agreement as to what the integration of faith and learning should look like in pedagogical and cross-disciplinary terms. This volume proposes that faith and learning are interrelated from the start. Discovery of truth within the academic disciplines cultivates discipline-specific wisdom that both accords with all reality and complements the whole counsel of God. Where Wisdom May Be Found brings together a faculty of twenty-seven accomplished voices from across curricula to celebrate each field's capacity for revealing wisdom from all corners of God's creative design. In synthesis, these voices declare the depth and richness of the wisdom and knowledge of God for the educational advancement and holistic equipping of the corporate people of God.

The Way the World Works, as partially figured out by John R Carpenter establishes the compatibilities to settle long-standing disagreements between atheists and religious devotees. In his desire to demonstrate that science and religion can co-exist, the author pens an illuminating book that attempts to reconcile these two purportedly opposing concepts in The Way the World Works. A valuable volume, this book deals with the areas in which science and religion are too often seen to be in

conflict with each other and will provide readers with examples of how existing controversies between science and religion do not have to end in either-or, but can often end in both-and. An established man of science and a Christian, Carpenter provides evidence that religion and science are two sources of inspiration and elucidation that are neither antithetical nor hostile to each other. Rather, they are synergistic and mutually advantageous, that when joined together, produces an effect greater than the sum than what they emit independently.

According to a recent survey, the most popular question about science from the general public was: what came before the Big Bang? We all know on some level what the Big Bang is, but we don't know how it became the accepted theory, or how we might know what came before. In Before the Big Bang, Brian Clegg (the critically acclaimed author of Upgrade Me and The God Effect) explores the history of this remarkable concept. From the earliest creation myths, through Hershel's realization that the Milky Way was one of many galaxies, to on-going debates about Black Holes, this is an incredible look at the origins of the universe and the many theories that led to the acceptance of the Big Bang. But in classic scientist fashion Clegg challenges the notion of the "Big Bang" itself, and raises the deep philosophical question of why we might want to rethink the origin of the universe. This is popular science at its best, exploratory, controversial, and utterly engrossing.

This anthology - the first of its kind in eight years - collects some of the best and most current research and reflection on the complex interactions between religion and computer-mediated communication (CMC). The contributions cohere around the central question: how will core religious understandings of identity, community and authority shape and be (re)shaped by the communicative possibilities of Web 2.0? The authors gathered here address these questions in three distinct ways: through contemporary empirical research on how diverse traditions across the globe seek to take up the technologies and affordances of

contemporary CMC; through investigations that place these contemporary developments in larger historical and theological contexts; and through careful reflection on the theoretical dimensions of research on religion and CMC. In their introductory and concluding essays, the editors uncover and articulate the larger intersections and patterns suggested by individual chapters, including trajectories for future research.

By appealing to Paul Ricoeur's view of interpretation as the dialectical process of understanding through explanation, Kenneth A. Reynhout contributes to the growing field of religion and science by developing an alternative understanding of interdisciplinary theology that is fundamentally hermeneutical.

The thought of the ages has looked to the day when science and religion shall walk hand in hand through the visible to the invisible. A movement that endeavors to unify the great conclusions of human experience must be kept free from personal ambitions and interpretation. If science recognizes only a government of law whose principles are universal, and religion becomes dogmatic and often superstitious when based on any one personality, for "Religious Science" to exist, the focus must insistently be on God; ever present,

ever available. In essence, this was the primal message of the enlightened prophets of all the ages, and this is the message or Religious Science. What Religious Science Teaches is a summation of the Science of Mind theory that proclaims there is One Infinite Mind which of necessity includes all that is, whether it be the intelligence in man, the life in the animal, or the invisible Presence which is God. In it we learn to have a spiritual sense of things.

The volume provides historical context for the contemporary discourse around religion and science, detailing the

emergence of modern science from earlier movements related to magic and other esoteric arts, the impact of the Reformation on science, and the dependence of Western science on the so-called Golden Age of Islam. In addition, contributors examine the impacts of Western science and colonialism on the ongoing theft of the biological resources of traditional and indigenous communities in the name of science and medicine. The volume's multi-perspectival approach aims to refocus the terms of the conversation around science and religion, taking into consideration multiple rationalities outside of the dominant discourse.

The reality of evolution is indisputable and, based on current scientific

evidence, all people in the world should accept it as fact. Yet, only 41% of adults worldwide embrace evolution, and they do it under the premise that a deity created humans. One in every three people is a strict creationist who believes in religious scriptures concerning the origin of our universe and of humans, and explicitly rejects that *Homo sapiens* is an ape when, in fact, science informs us that humans' closest relatives are chimpanzees, bonobos, gorillas and orangutans. Indeed, we are all apes. Why do people not accept evolution? In *Measuring the Evolution Controversy*, Guillermo Paz-y-Miño-C and Avelina Espinosa postulate that the debate over evolution-and-science versus creationism is inherent in the incompatibility between scientific rationalism/empiricism and the belief in supernatural causation (religion and faith). Belief disrupts, distorts, delays or stops the comprehension and acceptance of scientific evidence. The authors refer to this proposal as the incompatibility hypothesis (IH), the conceptual foundation of this book. Paz-y-Miño-C and Espinosa explain that the evolution controversy is not only measurable descriptively, but also testable as in an ordinary field of science. To accomplish this, they examine three predictions of IH. First, chronological-conflict-and-accommodation (i.e. the historical re-emergence of antagonism between

evolution and religion when advances in science continue to threaten the belief in supernatural causation; in such situations, creationists' rejection of and subsequent partial acceptance of the new scientific discoveries are expected). Second, change in evolution's acceptance as function of educational attainment (i.e. the positive association between acceptance of evolution and level of education). Third, change in evolution's acceptance as function of religiosity (i.e. the negative association between acceptance of evolution and level of religious beliefs). By relying on an ample assessment of the attitudes towards evolution by highly educated audiences (i.e. research faculty, educators of prospective teachers, and college students in the United States) the authors characterise their understanding of science and evolution, personal religious convictions, and political ideology. The authors make recommendations for improving science and evolution literacy, as well as evolution's acceptance, and conclude by forecasting a probable global socio-cultural landscape in which acceptance of science and evolution will take place.

This volume extends the insights of queer theory in order to unsettle or “queer” our understandings of “religion,” “science,” and the relationship between them. It asks how queer religion, science, and philosophy can and/or should be as a way to continue our conversations and explorations of the world in which we live.

The cognitive science of religion is a relatively new academic field in the study of the origins and causes of religious belief and behaviour. The focal point of empirical research is the role of basic human cognitive functions in the formation and transmission of religious beliefs. However, many theologians and religious scholars are concerned that this perspective will reduce and replace explanations

based in religious traditions, beliefs, and values. This book attempts to bridge the reductionist divide between science and religion through examination and critique of different aspects of the cognitive science of religion and offers a conciliatory approach that investigates the multiple causal factors involved in the emergence of religion.

Religion, Science and the Bible - are they compatible? Can you believe in them at the same time? Pressures from both sides seem to push and pull for their exclusivity alone. Here is a synthesis of religion, science and the Bible which helps encourage those who love both science and the Bible. You can believe and it's OK to believe in both science and the Bible.

In recent decades Christian spirituality, spiritual formation and spiritual theology have become important concepts in the global evangelical community.

Consequently, an accessible and reliable academic resource is needed on these topics—one that will offer a discerning orientation to the wealth of ecumenical resources available while still highlighting the distinct heritage and affirming the core grace-centered values of classic evangelical spirituality. The Dictionary of Christian Spirituality reflects an overarching interpretive framework for evangelical spiritual formation: a holistic and grace-filled spirituality that encompasses relational (connecting), transformational (becoming), and vocational (doing) dynamics. At the same time, contributors respectfully acknowledge the differences between Reformed, Holiness, and Pentecostal paradigms of the spiritual life. And, by bringing together writers from around the

world who share a common orthodoxy, this reference work is truly global and international in both its topical scope and contributors. Entries give appropriate attention to concepts, concerns, and formative figures in the evangelical tradition of spirituality that other reference work neglect. They offer a discerning orientation to the wealth of ecumenical resources available, exploring the similarities and differences between Christianity and alternate spiritualities without lapsing into relativism. The Dictionary of Christian Spirituality is a resource that covers a wide range of topics relating to Christian spirituality and is biblically engaged, accessible, and relevant for all contemporary Christians.

These sections - Creation, the Cosmos, and Origins of the Universe; Ecology, Evolution, and the Natural World; Consciousness, Mind, and the Brain; Healers and Healing; Dying and Death; and Genetics and Religion - organize the questions and research that are the foundation of the enormous interest, and controversy, in science and religion today.

Lucian Blaga was an early twentieth-century European philosopher whose work was suppressed at the height of his career by the creation of the Romanian Socialist Republic. Blaga's philosophical writings are rich and creative, spanning metaphysics, epistemology, philosophy of science, philosophical anthropology, aesthetics, philosophy of culture, philosophy of history, and philosophy of religion. Mircea Eliade wrote that Blaga was the most gifted and critical original thinker in the history of Romanian philosophy. Because of historical circumstances, Blaga's philosophy has not become known outside of his own country, although within Romania it continues to be read and discussed. Were it to become known outside of Romania, Blaga's philosophy could provide interesting contributions to contemporary philosophical discussions. The thesis of this book is that Blaga's philosophy can make valuable contributions to contemporary Anglo-

Gods voice whispers through the words of the prophet, Isaiah, I make known the end from the beginning, from ancient times, what is still to come. Isaiah 46:10 NIV When warning his disciples about heaven and earth passing away, Jesus said, No one knows about that day or hour, not even the angels in heaven, nor the Son, but only the Father. Be on guard! Be alert! You do not know when that time will come. Mark 13:32-33 NIV Are we to believe that God makes known the end from the beginning? Or, should we believe that the day and the hour are unknowable? In truth, these seemingly contradictory verses in Scripture are equally believable when time is

viewed on two different clocks. To date, however, humankind has relied solely on the 24-hour clock that secured residence within the human mind more than 8,000 years ago. Humanity's one-clock perspective of time is entirely useless in determining spiritual beginnings and endings. Yet, a different perspective emerges from the text of Genesis 1 which does, in fact, make known the end from the beginning. The Clock, revealed within the pages of this book, will help the human spirit develop a healthy theology of time and not a moment too soon! Through the lens of light, color, and image, The Clock's colorful face revisits the past, identifies the present, and makes known the future while orienting the human mind on its journey through time. If Jews and Christians desire additional insight into our shared spiritual beginnings, we must discover The Clock in Genesis 1 and embrace a two-clock perspective of time. Once aware of a second timekeeping option, the mystery surrounding many end-times scenarios will be removed enabling us to travel together with confidence into our projected future. Its time to understand the times!

It's very fashionable nowadays to assert that Christianity and science are antithetical, or that God has been ruled out of science or disproven (particularly by Darwinian evolution), or that science is based on reason and evidence, whereas religion (being faith-based) supposedly cares little or nothing for same, or that one cannot consistently be a Christian and also a "real" scientist. I shall contend that not only are science and Christianity completely compatible, but that modern science would not

have even gotten off the ground if it hadn't been for medieval, scholastic, Catholic thought. I shall demonstrate that the foundations of modern science in the 16th century were overwhelmingly Christian and theistic. The notion that science and religion are fundamentally incompatible is ludicrous and would obliterate science at its very roots. Includes: mini-biographies of 293 scientists and a chart of 115 scientific fields of study founded or extraordinarily advanced by Christian or theistic scientists. Creation and Complexity are two themes that draw the sciences and theology together. The remarkable advances of science in the modern period have opened up new knowledge and revealed ever deepening layers of complexity in the world from the cosmic macro level to the micro world of quantum. There seems no end to the rich tapestry of the cosmic order and process. A science of complexity has been spawned. The discoveries of the sciences have been matched in the twentieth century by a renewal in the doctrine of creation. Behind this lies a renaissance in trinitarian thinking which offers fresh insight into the dynamic of God in creation - past, present and future. The complexity of the triune God in creation find echoes in the rich complexity of the world uncovered by the contemporary sciences. This book explores the nature of complexity in God's creation.

Evolution is just a theory, isn't it? What is a scientific theory anyway? Don't scientists prove things? What is the difference between a fact, a hypothesis and a theory in science? How does scientific thinking differ from religious thinking? Why are most leading scientists atheists? Are science and religion compatible? Why are there so many different religious beliefs but only one science? What is the evidence for evolution? Why does evolution occur? If you are interested in any of these questions and have some knowledge of biology, this book is for you.

This debut book boldly seeks to argue competitively in the same intellectual field as famous atheists such as RICHARD DAWKINS, CHRISTOPHER HITCHENS, and BERTRAND RUSSELL, and to do so in the spirit and style of such famous Christian apologists as C.S. Lewis and RAVI ZACHARIAS, drawing heavily on basic science, history, physics, psychology, paleontology, anthropology, archeology,

neurology, child development and even science fiction. It describes the evolution of the human brain in ancient hominids allowing humans to eventually conceive a non-physical realm (the spirit world), and as the mind evolved intellectually from primitive animism to Christology, God revealed himself gradually as the developing hominid brain became able to comprehend new ideas. For Believers, the author presents a new, intellectually satisfying way to understand and defend the Bible. For both Skeptics and Believers, a worldview is offered that is spiritually meaningful and scientifically sound. If we want nonscientists and opinion-makers in the press, the lab, and the pulpit to take a fresh look at the relationship between science and religion, Ronald L. Numbers suggests that we must first dispense with the hoary myths that have masqueraded too long as historical truths. Until about the 1970s, the dominant narrative in the history of science had long been that of science triumphant, and science at war with religion. But a new generation of historians both of science and of the church began to examine episodes in the history of science and religion through the values and knowledge of the actors themselves. Now Ronald Numbers has recruited the leading scholars in this new history of science to puncture the myths, from Galileo's incarceration to Darwin's deathbed conversion to Einstein's belief in a personal God who "didn't play dice with the universe."
