This edition of Bouncebacks! Emergency Medicine books examines the bounceback visit, putting the reader in the footsteps of the clinician as the patient deteriorates. The story pauses at important decision points as possible management strategies are reviewed in a literature-based fashion, followed by a revelation of

the path chosen by the actual provider. As the patient's course progresses, we reach additional decision points and address further clinical questions. In addition to our chapter authors, many with expertise in critical care emergency medicine, we have an all-star lineup of expert-whisperers: first an EM/critical care section editor (below) and second, EMCRI.org's double-boarded critical care guru, Scott Weingart. Their comments are inserted in grey boxes and are intended to give tips and tricks borne of experience and to provide context to the literature, "as if" they are standing over our shoulder and advising during a resuscitation. Additionally, there are three chapters where we address the medical-legal aspects of

care. Enter Greg Henry MD, past president of The American College of Emergency Physicians (ACEP) and one of the most experienced physician medical-legal experts in the country. He opines on the approach that both the defense and plaintiff would likely pursue and, by extension, how we can make patients safer through our evaluation and documentation before there is an adverse outcome. Whereas, these chapters contain the actual documentation from the ED chart, a very few chapters have slight modifications to the final aspects of the return visit at decision point 3, to allow for exploration of different critical care scenarios. There is still plenty of commentary on the documentation, missed red-flags,

and what could have been done to improve care at the initial visit. Our goal is to make each chapter challenging, dynamic, and realistic... to move us from “standard of care” to “excellence in care.” Book Review: "It's back, it's Bouncebacks! One of the mostly widely read and highly regarded education series in all of Emergency Medicine. Clinicians fear the medical malpractice landscape, but Mike Weinstock and the team give you all the tools you need to protect yourselves. Documentation people, documentation. Now with a critical care version. Read this book, sleep better at night, as simple as that! Love, love this series!" -- Mel Herbert, MD, MBBS, BMedSci, FACEP, FAAEM Professor of Emergency

Children may require high dependency care for a variety of reasons, and this care is delivered ideally in a designated high dependency unit. However, sometimes this care is delivered in the general paediatric ward or even an adult ward as a temporary measure. "Children's High Dependency Nursing" is an invaluable resource for nurses who are delivering high dependency care to children as it provides them with the knowledge required to deliver effective and high quality high dependency care. "Children's High Dependency Nursing" explores all the key areas required for effective nursing care,

With practical features such as learning outcomes, case studies and activities throughout its contents, this book is an indispensable guide for postregistration children's nurses who provide high dependency care, and children's nurses who are starting their careers in intensive care. The book will also be of use to adult nurses who are working with children in A&E and intensive care environments.
