Human communication is grounded in fundamentally cooperative, even shared, intentions. In this original and provocative account of the evolutionary origins of human communication, Michael

Tomasello connects the fundamentally cooperative structure of human communication (initially discovered by Paul Grice) to the especially cooperative structure of human (as opposed to other primate) social interaction. Tomasello argues that human cooperative communication rests on a psychological infrastructure of shared intentionality (joint attention, common ground), evolved originally for collaboration and culture more generally. The basic motives of the infrastructure are helping and sharing: humans communicate to request help, inform others of things helpfully, and share attitudes as a way of bonding within the cultural group. These cooperative motives each created different functional pressures for conventionalizing grammatical constructions. Requesting help in the immediate you-and-me and here-and-now, for example, required very little grammar, but informing and sharing required increasingly complex grammatical devices. Drawing on empirical research into gestural and vocal communication by great apes and human infants (much of it conducted by his own research team), Tomasello argues further that humans' cooperative communication emerged first in the natural gestures of pointing and pantomiming. Conventional communication, first gestural and then vocal, evolved only after humans already possessed these natural gestures and their shared intentionality infrastructure along with skills of cultural learning for creating and passing along jointly understood communicative conventions. Challenging the Chomskian view that linguistic knowledge is innate, Tomasello proposes instead that the most fundamental aspects of uniquely human communication are biological adaptations for cooperative social interaction in general and that the purely linguistic dimensions of human communication are cultural conventions and constructions created by and passed along within

particular cultural groups.

The decision to learn to draw and paint invariably brings up a lot of questions for the beginner. "What medium should I try? What materials will I need? How do I make the first marks on a blank sheet of paper?" The most important question of all, of course, is: "Do I have any artistic talent?" In this book Mike Chaplin answers all those questions and more, ranging from basic markmaking with drawing tools, watercolors, pastels, and oils to tackling complicated subjects such as perspective in an easily comprehensible way. Which media you eventually decide you want to use the most will depend on your own temperament and your preferred style of

working, but all have something special to bring to a subject and your art will greatly benefit from trying them all. Meanwhile, Mike's accessible style of teaching will demonstrate to you that you can indeed draw and paint through learning the necessary techniques in a simple and structured way. A member of the prestigious Royal Watercolour Society of Great Britain, Mike Chaplin combines a notable career in art with communicating his knowledge and enthusiasm to artists in workshops in the UK and internationally.

Offers step-by-step instructions for completing twenty-seven colored pencil drawing projects, offering advice on appropriate supplies, color theory, and basic techniques in the medium.
