In this tribute to Knud Lambrecht, a pioneer of Information Structure, a diverse group of scholars examines the intersection of syntax, discourse, pragmatics, and semantics. The six chapters in the first section of the volume consider issues of grammar with new theoretical and applied insights, pertaining to grammatical constructions such as left dislocation, unaccusatives, null complements, and passives. While the first half of the book presents studies involving a range of languages from Russian to Irish to Italian, the second section is dedicated to papers focused on French. These five chapters feature the application of Construction Grammar and/or Information Structure frameworks to prosody and second language processing, as well as to several distinctive spoken French constructions: clefts, left dislocations, and interrogatives. Collectively, this book offers substantial reading for those interested in the juncture of structure and context, notably a critical take on the important legacy of a preeminent linguist.

Beshear Contributor Fired for Mismeasuring a Culvert By Terry M. Farmer, P.E. The functionality of a small culvert results in four litigation cases, along with the termination of Terry M. Farmer, P.E. from the Kentucky Transportation Cabinet. The facts of this case, along with information from the litigation cases, make up the bulk of evidence for and against Mr. Farmer. This information depicts the interaction between employer and employee, and brings to light one man's case of employee personnel matters.

From the publishers of the Annotated Laws of West Virginia comes this convenient, single-volume desktop reference providing affordable access to the full range of criminal laws and rules in West Virginia. Included are the entirety of Chapters 61 (Crimes & Their Punishments) and 62 (Criminal Procedure) as well as a curated selection of related articles spanning 25 chapters of the code. The volume also includes the whole of the West Virginia Rules of Criminal Procedure, West Virginia Rules of Evidence, Rules of Criminal Procedure of the Magistrate Courts of West Virginia, and the Criminal Matters chapter of the West Virginia Trial Court Rules (T.C.R.). With the included case and statutory annotations and a comprehensive index, this will fast become the handy go-to reference to which practicing West Virginia criminal attorneys will turn.

Nations throughout the world receive more patent applications, grant more patents, and entertain more patent infringement lawsuits than ever before. To understand the contemporary patent system, it is crucial to become familiar with how courts and other actors in different countries enable patent owners to

enforce their rights. This is increasingly important, not only for firms that seek to market their products worldwide and for the lawyers who provide them with counsel, but also for scholars and policymakers working to develop better policies for promoting the innovation that drives long-term economic growth. Comparative Patent Remedies provides a critical and comparative analysis of patent enforcement in the United States and other major patent systems, including the European Union, Japan, Canada, Australia, China, South Korea, Taiwan, and India. Thomas Cotter shows how different countries respond to similar issues, and suggests how economic analysis can assist in adapting current practice to the needs of the modern world. Among the topics addressed are: how courts in various nations award monetary compensation for patent infringement, including lost profits, infringer's profits, and reasonable royalties; the conditions under which patent owners may obtain preliminary and permanent injunctions, including cross-border injunctions in the European Union; the availability of various options for potential defendants to challenge patent validity; and other matters, such as the availability of criminal enforcement and border measures to exclude infringing goods.

Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was

afterwards taken off by the order of the House." Verbal Pseudo-Coordination (as in English 'go and get') has been described for a number of individual languages, but this is the first edited volume to emphasize this topic from a comparative perspective, and in connection to Multiple Agreement Constructions more generally. The chapters include detailed analyses of Romance, Germanic, Slavic and other languages. These contributions show important cross-linguistic similarities in these constructions, as well as

their diversity, providing insights into areas such as the morphology-syntax and syntax-semantics interfaces, dialectal variation and language contact. This volume establishes Pseudo-Coordination as a descriptively important and theoretically challenging cross-linguistic phenomenon among Multiple Agreement Constructions and will be of interest to specialists in individual languages as well as typologists and theoreticians, serving as a foundation to promote continued research.

REVISION 22 HIGHLIGHTS This edition (Revision 22) of Handling Federal Discovery provides significant text updates to virtually every task associated with federal discovery litigation. Over 100 new cases have been added; the analyses have been expressly refined to reflect modern electronic discovery; and the prior edition's voluminous case law on proportionality and the 2015 Amendments to the Federal Rules of Civil Procedure have been subsumed into Chapter 13.

Practitioners will find a renewed focus on split of authority issues, so as to anticipate opposing arguments and successfully navigate them when they are advanced. Some key developments covered include: Planning Discovery Determine Discovery Goals (Task 1) Privilege and Work Product Assert Attorney-Client Privilege (Task 12) Challenge a Privilege Log (Task 17) Nonparty Discovery Prepare Subpoenas (Task 40) Challenge Subpoenas (Task 41) Requests for Admission Propound Requests for Admission (Task 52) Withdraw or Amend Admissions (Task 55) Depositions Notice of Depositions (Task 57) Notice

This study deals with the investigation regarding the behavior of liquid cryogenic propellants in the launcher upper stages under microgravity with superheated tank walls. It contributes in this way to the application-oriented basic research by describing mathematically and quantifying experimentally the influence of

evaporation on the interface reorientation of cryogenic liquids. In broader terms this work shows, both in a mathematical and an experimental way, the influence of the heat and mass transfer in the fluid and solid phases on the linear momentum transfer in the liquid phase due to the coupling of the transfer mechanisms. The main assumption behind this study is based on the principle that the solution of a partial differential equation depends on its boundary condition. In this case these are the mass balance boundary conditions at the interface and the contact line. These boundary conditions relate the respective liquid and the interface velocities to the mass flux due to interfacial evaporation, or phase change in general. A mathematical description of the reorientation was developed implementing an equation for the contact line boundary condition which takes explicitly into account the evaporation or the wall superheat at the contact line, respectively. Both the contact line velocity and the contact line angle become functions of the evaporation at the contact line and accordingly of the related dimensionless numbers. The implementation of the contact line boundary condition completes the equation system describing the non-isothermal flow macroscopically. A joint scaling approach of all field equations and boundary conditions was developed through which the influence of evaporation on the capillary-driven motion was expressed mathematically. This influence on the motion of the whole interface was experimentally quantified, too. For that purpose cryogenic liquids were used in drop tower experiments at ZARM, University of Bremen, with varying wall temperature gradients above the liquid-vapor interface. The experiments present the first experimental investigation of the reorientation of cryogenic liquids

under non-isothermal boundary conditions. The characteristics of the interface motion were found to vary in dependence on the dimensionless numbers related to evaporation arising from the above mentioned two boundary conditions, especially at the contact line. Thus the variation of the interface dynamics during the reorientation, e.g. an increase of both the oscillation frequency of the interface center point and of the mean velocity of the contact line after its initial transient rise, is attributed to the variation of evaporation. In contrast the influence of capillarity as a driving mechanism of the reorientation remains practically the same.

*The American legal system is the most significant in the world today, yet until recently there had not been a book that provided both the basic rules and the theoretical understanding necessary to comprehend it. Now, **Fundamentals of American Law** supplies these concepts to a number of audiences, ranging from students and scholars of law to business people and government officials; from those whose work regularly involves legal issues and who want to understand the law better than they do now, to the general reader who wants to gain a stronger appreciation of our legal system. In twenty-three chapters, the book looks at the overarching principles of American law, the seven subject areas primarily governed by the States, and the eight areas governed by Federal Law. Each chapter is written by an acknowledged expert in that area. All of the authors are on the faculty of the New York University School of Law, regarded as one of the elite law schools in America, and this work is offered as an element of its unique Global Law School Program. The book not only provides the reader with a solid foundation of American law, but will also serve as a basic reference book for years to come. **Fundamentals of***
