**Treatment of hair disorders has progressed considerably over time. More patients are now interested in hair care and some are bombarded by promising advertisements. In reality, hair disorders may be complex and require accurate diagnosis for suitable treatment. Hair Loss and Restoration provides an extensive look at the practical management, both medical and surgical, of all forms of hair loss. Proper examination of the patient with hair loss is discussed in depth as is androgenetic alopecia, the most common cause of hair loss. The autoimmune disease alopecia areata is examined comprehensively, including its pathogenesis, clinical features, differential diagnosis, and treatment. This edition also covers new developments on the diagnosis and treatment of the disease. Hair loss from drugs and radiation is reviewed along with other topics such as telogen effluvium and frontal fibrosing alopecia—an increasing concern in scarring hair loss. Hair restoration surgery is described in detail and an excellent review of what is available from a nonmedical approach to hair loss is provided.**

Dermatology clinics are extremely fast-paced, and while the internet is useful, online resources can slow clinics down as it can often take lengthy amounts of time to obtain meaningful information. Recognizing this problem, Dr. Vashi has developed, over the course of several years, a practical guide targeted towards practicing dermatologists, resident physicians, medical students, family practitioners, nurse practitioners, and physician assistants. The Dermatology Handbook provides clinical information and quick solutions to common problems typically faced by dermatologists in a user-friendly

and meaningful way. Designed to fit into a coat pocket, the content is presented as bulleted lists, along with tables and algorithms to allow busy clinicians to find the information they need rapidly. Featuring fill in the blank pages for users to personalize, this handbook is at once both comprehensive and succinct. Chapters include sections on the most common dermatologic complaints, differential diagnoses, laboratory techniques, dermoscopy, dermatologic emergencies, commonly used medications, pediatrics, surgery basics, and cosmetic pearls. Drug tables, guidelines, and algorithms for history taking and treatment approach also work to provide the reader with efficient usability.

Richly pigmented skin is the most common skin type internationally. Historically, dermatology has focused on white skin. But rich pigmentation can lead to differences in presentation, disease course and outcome, and reaction to treatment. Some dermatologic conditions are seen predominantly or only in richly pigmented skin. *Ethnic Dermatology: Principles and Practice* provides a practical approach to the dermatology of non-white skin. Written from a global perspective to include Asian, African-Caribbean and North African skin types, it covers all the bases of dermatology including: Grading scales in dermatologic disease Pediatric dermatology Dermatology and systemic disease Drug eruptions Hair and scalp disorders Cosmetic

An era of global population aging is upon us. By 2030, one in eight people will be over age 65. Since women generally live longer than men, the health and welfare of postmenopausal women will become a significant public health concern. This book offers a comprehensive review of the life changes associated with menopause, both at the dermatological and physiological level (e.g., hormonal, immunological) and at the subcellular level. It critically examines the dermatological, biological, and clinical challenges to postmenopausal health and well-being and the current and emerging therapeutic interventions. The authors advocate a holistic approach,

emphasizing the need to view the menopause as a life transition with various facets rather than as a series of distinct medical conditions to be managed. Our goal is to offer a comprehensive resource to the researchers, clinicians, physicians, and helping professions whose mission is to promote the health and well-being of women around the world.

Along with its sister dermatologic volume, this comprehensive textbook of laser technology covers the use of lasers to treat vascular anomalies and lesions, control of pigmented lesions and tattoos, hair removal, acne, facial rejuvenation, Psoriasis, hypopigmented lesions and Vitiligo. The aim of this atlas is to provide detailed and comprehensive, easy-to-use information, sufficient to perform trichoscopy in clinical practice. From basics to advanced knowledge, everything in one book. In this sense it is rather an “illustrated textbook” than solely an atlas. It includes evidence based information, acknowledged algorithms, which help easy diagnosis and “take home messages”, which aid memorizing specific features of diverse diseases. The atlas consists of two major parts. In the first part the authors describe structures and patterns seen in trichoscopy. The second part consists of detailed description of characteristic trichoscopy features of diverse diseases of hair and scalp. Consecutive chapters illustrate genetic hair disorders, acquired hair loss and scalp diseases.

Dermatology is the science responsible for the study of the skin, mucous membranes (oral and genital) and cutaneous appendages, while dermatopathology focuses on its microscopic study. Although the two fields are closely related, in many cases the identification of dermatological diseases is mainly clinical and depends on the physicians ability and experience. The purpose of this atlas, which collects over 900 clinical and histological photographs in high resolution, is to illustrate and describe the most frequent skin diseases on the basis of clinical cases. Offering a complete guide to the etiology, epidemiology, clinical features, histologic findings and diagnosis of the main skin diseases divided into three subgroups (inflammatory, infectious, or tumoral), it represents an invaluable resource for all medical students, residents, clinicians, and investigators

learning dermatology.

This guide to dermatological treatments provides concise yet comprehensive, up-to-date overviews of treatment guidelines and pearls for a plethora of skin diseases. It is divided into three main sections that address the many different skin diseases, the drugs available for dermatological treatments, and the various methods applied in dermatology, including fillers, botulinum toxin, lasers, dermoscopy, cryosurgery, and electrosurgery. Each skin disease-focused chapter describes current treatments while also providing a brief synopsis of etiology and clinical presentation. Treatment indications and contraindications, modes of action, and dosages are clearly identified. This third edition of the European Handbook of Dermatological Treatments has been extensively revised to reflect the advances of the past decade, including biologic agents for psoriasis, also used as promising off-label treatments in other skin diseases, targeted agents for malignant melanoma and basal cell carcinoma, and new treatment modalities for rosacea, acne, atopic dermatitis, and urticaria, to name but a few. The successful easy-to-use format is retained in this new edition, which is enriched with clinical photos that will make reading a pleasurable as well as a learning experience.

contribute significantly to the dissemination of knowledge about the indication/contraindication, mechanism of action, ethical use, side-effects and various other facets related to topical corticosteroid. Topical corticosteroids (TC) have greatly enhanced dermatologists' ability to effectively treat several difficult dermatoses. The available range of formulations and potencies allows them to flexibly treat all groups of patients, different phases of disease, and different anatomic sites. Improper/incomplete knowledge about topical corticosteroids' mechanism of action, indications, classifications, and contraindications has produced a rapid rise in the incidence of improper use of these drugs, which could potentially bring disrepute to this entire group of amazing drugs. Responsibility for disseminating proper knowledge regarding when, where, and how to use TC both to internists and patients primarily rests with dermatologists. In this regard, the benefits of rational and ethical use and the potential harm of overuse and misuse for nonmedical, especially cosmetic purposes, should be clearly conveyed before prescribing TC.
