This is a story of people sent out of their ancestral land as refugees. So the cover design will show women carrying their babies on the backs, typical of African women, with loads on their heads. Men carrying their loads on their heads. The background has to be a beach, a river bank as they arrive from Bakassi. At the bank of the river are mangrove trees. In the river more people are paddling their boats heading to the same river bank..

"Where this book is exceptional is that the reader will not just learn how LTE works but why it works" Adrian Scrase, ETSI Vice-President, International Partnership Projects Following on the success of the first edition, this book is fully updated, covering the latest additions to LTE and the key features of LTE-Advanced. This book builds on the success of its predecessor, offering the same comprehensive system-level understanding built on explanations of the underlying theory, now expanded to include complete coverage of Release 9 and the developing specifications for LTE-Advanced. The book is a collaborative effort of more than 40 key experts representing over 20 companies actively participating in the development of LTE, as well as academia. The book highlights practical implications, illustrates the expected performance, and draws comparisons with the well-known WCDMA/HSPA standards. The authors not only pay special attention to the physical layer, giving an insight into the fundamental concepts of OFDMA-FDMA and MIMO, but also cover the higher protocol layers and system architecture to enable the reader to gain an overall understanding of the system. Key New Features: Comprehensively updated with the latest changes of the LTE Release 8 specifications, including improved coverage of Radio Resource Management RF aspects and performance requirements Provides detailed coverage of the new LTE Release 9 features, including: eMBMS, dual-layer beamforming, user equipment positioning, home eNodeBs / femtocells and pico cells and self-optimizing networks Evaluates the LTE system performance Introduces LTE-Advanced, explaining its context and motivation, as well as the key new features including: carrier aggregation, relaying, high-order MIMO, and Cooperative Multi-Point transmission (CoMP). Includes an accompanying website containing a complete list of acronyms related to LTE and LTE-Advanced, with a brief description of each

(http://www.wiley.com/go/sesia_theumts) This book is an invaluable reference for all research and development engineers involved in implementation of LTE or LTE-Advanced, as well as graduate and PhD students in wireless communications. Network operators, service providers and R&D managers will also find this book insightful. As information technology (IT) becomes specialized and fragmented, it is easy to lose sight that many topics have common threads and because of this, advances in one s-discipline may transmit to another. The presentation of results between different s-disciplines encourages this interchange for the advancement of IT as a whole. This volume comprises the selection of papers presented at the Second International Mega-Conference on Future Generation Information Technology (FGIT 2010), composed of the following 11 international conferences: Advanced Software Engineering and Its

Applications (ASEA 2010), Bio-Science and Bio- Technology (BSBT 2010), Control and Automation (CA 2010), Disaster Recovery and Business Continuity (DRBC 2010), Database Theory and Application (DTA 2010), Future Generation Communication and Networking (FGCN 2010), Grid and Distributed Computing (GDC 2010), Multimedia, Computer Graphics and Broadcasting (MulGraB 2010), Security Technology (SecTech 2010), Signal Processing, Image Processing and Pattern Recognition (SIP 2010), as well as u- and e-Service, Science and Technology (UNESST 2010). In total, 1,630 papers were submitted to FGIT 2010 from 30 countries. The submitted papers went through a rigorous reviewing process and 395 papers were accepted. Of these 395 papers, 60 were assigned to this volume. In addition, this volume contains 7 invited papers and abstracts. Of the remaining accepted papers, 269 were distributed among 8 volumes of proceedings published by Springer in the CCIS series. 66 papers were withdrawn due to technical reasons.

Potter & Perry's Fundamentals of Nursing ANZ edition - eBook

The Handover

Human Factors in the Health Care Setting

German Medical Data Sciences: Visions and Bridges

LTE Optimization Engineering Handbook

We live in an age characterized by computerized information, but ubiquitous information technology has profoundly changed our healthcare systems and, if not adequately trained to deal with it, healthcare professionals can all too easily be overwhelmed by the complexity and magnitude of the data. This demands new skills from physicians as well as novel ways to provide medical knowledge. Selecting and assessing relevant information presents a challenge which can only be met by bridging the various disciplines in healthcare and the data sciences. This book presents the proceedings of the 62nd annual meeting of the German Association of Medical Informatics, Biometry and Epidemiology (German Medical Data Sciences - GMDS 2017): Visions and Bridges, held in Oldenburg, Germany, in September 2017. The 242 submissions to the conference included 77 full papers, of which 42 were accepted for publication here after rigorous review. These are divided into 7 sections: teaching and training; epidemiological surveillance, screening and registration; research methods; IT infrastructure for biomedical research/data integration centers; healthcare information systems; interoperability - standards, terminologies, classification; and biomedical informatics, innovative algorithms and signal processing. The book provides a vision for healthcare in the information age, and will be of interest to all those concerned with improving clinical decision making and the effectiveness and efficiency of health systems using data methods and technology.

true-PDF from: Sales@ChineseStandard.net] This Part of GB/T 31024 specifies the technical requirements for medium access control layer and physical layer of dedicated short-range communications of cooperation of roadside to vehicle, including system reference model, MAC layer frame format and MAC layer function of communication mode with center node, MAC layer frame format and function of communication mode without center node, physical layer parameters and functions of communication mode with center node, physical layer parameters and functions of communication mode without center node.

Communicating effectively in a foreign language requires a level of understanding that goes far beyond the learning of vocabulary and grammar. Textbook English is seldom the language of the workplace. Apparently familiar words and phrases may both amuse and confuse the learner when used in different contexts. Nowhere is this more evident than in the field of healthcare. The Arakelian Programme introduces international nurses to the culture of the health service in the United Kingdom. Catharine Arakelian has demonstrated tremendous insight into the development of communication and language skills. Her approach makes learning English a fun experience. The exercises encourage good listening and observation skills, essential elements of mastering a foreign language.

In this new edition Peter Spurgeon and Robert Klaber take you through the latest leadership and management thinking, in particular the medical leadership competency framework as endorsed by the GMC for undergraduate and postgraduate education.

This text presents a four-step approach for applying communicative concepts to driving automation, including: scoping, piloting, designing, and testing. It further provides experimental data on how

practical human-human communication strategies can be applied to interaction in automated vehicles. The book explores the role of communication and the nature of situation awareness in automated vehicles to ensure safe and usable automated vehicle operation. It covers the issue of interaction in automated vehicles by providing insight into communicative concepts, the transfer of control in human-teams, and how these concepts can be applied in automated vehicles. The theoretical framework is built on by presenting experimental findings, design workshop output and providing a demonstration of prototype generation for automated assistants that addresses a wide range of performance outcomes within human-machine interaction. Aimed at professionals, graduate students, and academic researchers in the fields of ergonomics, automotive engineering, transportation engineering, and human factors, this text: Discusses experimental findings on how practical human-human communication strategies can be applied to interaction in automated vehicles. Provides a four-step approach for applying communicative concepts to driving automation, including: scoping, piloting, designing and testing. Explores the role of distributed situation awareness in automated vehicles. Covers communication and system awareness in response to multiple complex road scenarios. Provides design guidelines for automation-human handover design.

This book provides a common framework for mobility management that considers the theoretical and practical aspects of systems optimization for mobile networks. In this book, the authors show how an optimized system of mobility management can improve the quality of service in existing forms of mobile communication. Furthermore, they provide a theoretical approach to mobility management, as well as developing the model for systems optimization, including practical case studies using network layer and mobility layer protocols in different deployment scenarios. The authors also address the different ways in which the specific mobility protocol can be developed, taking into account numerous factors including security, configuration, authentication, quality of service, and movement patterns of the mobiles. Key Features: Defines and discusses a common set of optimization methodologies and their application to all mobility protocols for both IPv4 and IPv6 networks Applies these technologies in the context of various layers: MAC layer, network layer, transport layer and application layer covering 802.11, LTE, WiMax, CDMA networks and protocols such as SIP, MIP, HIP, VoIP, and many more Provides a thorough analysis of the required steps during a mobility event such as discovery, network selection, configuration, authentication, security association, encryption, binding update, and media direction Includes models and tables illustrating the analysis of mobility management as well as architecture of sample wireless and mobility test beds built by the authors, involving inter-domain and intra-domain mobility scenarios This book is an excellent resource for professionals and systems architects in charge of designing wireless networks for commercial (3G/4G), LTE, IMS, military and Ad Hoc environment. It will be useful deployment guide for the architects

wireless service providers. Graduate students, researchers in industry and academia, and systems engineers will also find this book of interest.

This evidence-based book serves as a clinical manual as well as a reference guide for the diagnosis and management of common nutritional issues in relation to gastrointestinal disease. Chapters cover nutrition assessment; macro- and micronutrient absorption; malabsorption; food allergies; prebiotics and dietary fiber; probiotics and intestinal microflora; nutrition and GI cancer; nutritional management of reflux; nutrition in IBS and IBD; nutrition in acute and chronic pancreatitis; enteral nutrition; parenteral nutrition; medical and endoscopic therapy of obesity; surgical therapy of obesity; pharmacologic nutrition, and nutritional counseling.

A COMPENDIUM OF POLITICS, EKID HISTORY, AND AFRICAN TRADITIONAL RELIGION

International Conference on Computer Networks and Communication Technologies

Over the past decade, system-on-chip (SoC) designs have evolved to address the ever increasing complexity of applications, fueled by the era of digital convergence. Improvements in process technology have effectively shrunk board-level components so they can be integrated on a single chip. New on-chip communication architectures have been designed to support all inter-component communication in a SoC design. These communication architecture fabrics have a critical impact on the power consumption, performance, cost and design cycle time of modern SoC designs. As application complexity strains the communication backbone of SoC designs, academic and industrial R&D efforts and dollars are increasingly focused on communication architecture design. On-Chip Communication Architectures is a comprehensive reference on concepts, research and trends in on-chip communication architecture design. It will provide readers with a comprehensive survey, not available elsewhere, of all current standards for on-chip communication architectures. A definitive guide to on-chip communication architectures, explaining key concepts, surveying research efforts and predicting future trends Detailed analysis of all popular standards for on-chip communication architectures Comprehensive survey of all research on communication architectures, covering a wide range of topics relevant to this area, spanning the past several years, and up to date with the most current research efforts Future trends that will have a significant impact on research and design of communication

architectures over the next several years

The Transactions on Pattern Languages of Programming subline aims to publish papers on patterns and pattern languages as applied to software design, development, and use, throughout all phases of the software life cycle, from requirements and design to implementation, maintenance and evolution. The primary focus of this LNCS Transactions subline is on patterns, pattern collections, and pattern languages themselves. The journal also includes reviews, survey articles, criticisms of patterns and pattern languages, as well as other research on patterns and pattern languages. This book, the third volume in the Transactions on Pattern Languages of Programming series, presents five papers that have been through a careful peer review process involving both pattern experts and domain experts. The papers present various pattern languages and a study of applying patterns and represent some of the best work that has been carried out in design patterns and pattern languages of programming over the last few years.

Vehicle accidents on the roads and highways occur every minute of every day, most often resulting in a loss of life or property damage. With advancing technology, vehicle infrastructure integration can increase road safety and transport efficiency through wireless sensor communications and other systems. These recent developments can bring inestimable economic value and will play a role in the next generation of vehicle products and traffic safety. *Global Advancements in Connected and Intelligent Mobility: Emerging Research and Opportunities* is an essential reference source that discusses the recent advances, safety, and efficiency in connected vehicles, as well as the next generation of communication network development. Featuring research on topics such as vehicular networks, telematics, and context-aware intelligence, this book is ideally designed for policymakers, traffic safety specialists, traffic control technicians, auto technicians, planning agencies, environmental managers, standardization governors, academicians, students, researchers, and industry practitioners seeking coverage on intelligent transportation systems.

The three-volume proceedings LNCS 10210-10212 constitute the thoroughly refereed proceedings of the 36th Annual International Conference on the Theory and Applications of Cryptographic Techniques, EUROCRYPT 2017, held in Paris, France, in April/May 2017. The 67 full papers included in these volumes were carefully reviewed and selected from 264 submissions. The papers are organized in topical sections named: lattice attacks and constructions; obfuscation and functional encryption; discrete logarithm; multiparty computation; universal composability; zero

knowledge; side-channel attacks and countermeasures; functional encryption; elliptic curves; symmetric cryptanalysis; provable security for symmetric cryptography; security models; blockchain; memory hard functions; symmetric-key constructions; obfuscation; quantum cryptography; public-key encryption and key-exchange.

Human factors relates to the interaction of humans and technical systems. Human factors engineering analyzes tasks, considering the components in relation to a number of factors focusing particularly on human interactions and the interface between people working within systems. This book will help instructors teach the topic of human factors.

Mathematics—Advances in Research and Application: 2012 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Mathematics. The editors have built Mathematics—Advances in Research and Application: 2012 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Mathematics in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Mathematics—Advances in Research and Application: 2012 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.

Based on detailed multi-disciplinary analyses of more than 800 recorded handover interactions, audits of written

handover documentation, interviews and survey responses, the contributing authors identify features of effective and ineffective clinical handovers in diverse hospital contexts. The authors then translate their descriptive findings into practical protocols, communication strategies and checklists that clinicians, managers and policy makers can apply to improve the safety and quality of clinical handovers. All the contributors are affiliated with the International Research Centre for Communication in Healthcare (IRCCH), an international multidisciplinary organisation of over 90 healthcare professionals from more than 17 countries committed to improving improving communication in healthcare systems around the world. 'The authors have created a new and tightly woven systems safety net that will, if implemented, significantly reduce the occurrence of errors resulting from cumulative communication failures.' -H. Esterbrook Longmaid III, MD, FACR, President of Medical Staff, Beth Israel Deaconess-Milton Hospital, Milton, MA USA 'Uncommonly valuable for the rigorous, original communication research it reports and for the careful translation of the research findings into practical strategies that actually improve clinical handovers in the real world of practice.' -Professor Suzanne Kurtz, Washington State University 'This clear, plain English book is an outstanding resource for the training of all involved in healthcare.' -Elizabeth Trickett, (Former) Director of Safety and Quality, ACT Health, Australia

An utterly charming and heart-warming love story and the perfect tonic for difficult times. Daisy is the night security guard at the Manchester Museum of Social History. She takes her job very seriously, protecting the museum from teenage troublemakers. Nate works the day shift, though he'd be more suited as a museum guide the way he chats with the visitors. Daisy doesn't approve: how does he find it so easy to talk to strangers? For five minutes each day their shifts overlap at handover. He passes the torch over to Daisy - always with a smile on his face, and she asks him for a full report of the day, which he gives reluctantly. It's the only interaction they have... until mysterious things begin to happen at the museum. They soon discover they have a lot more in common than they realised... and their investigations uncover more than just the truth. Could they have feelings for one another?

Proceedings of MIE2016

In this study of Hutu refugees from Burundi, driven into exile in Tanzania after their 1972 insurrection against the dominant Tutsi was brutally quashed, Liisa Malkki shows how experiences of dispossession and violence are remembered and turned into narratives, and how this process helps to construct identities such as "Hutu" and "Tutsi." Through extensive fieldwork in two refugee communities, Malkki finds that the refugees' current circumstances significantly influence these constructions.

Those living in organized camps created an elaborate "mythico-history" of the Hutu people, which gave significance to exile, and envisioned a collective return to the homeland of Burundi. Other refugees, who had assimilated in a more urban setting, crafted identities in response to the practical circumstances of their day to day lives. Malkki reveals how such things as national identity, historical consciousness, and the social imagination of "enemies" get constructed in the process of everyday life. The book closes with an epilogue looking at the recent violence between Hutu and Tutsi in Rwanda and Burundi, and showing how the movement of large refugee populations across national borders has shaped patterns of violence in the region.

This is the key text for introductory level nursing, covering all the core areas.

Practical and great value, it is comprehensive and also contains new chapters on cutting edge topics. Alongside an all-new companion website, this is an outstanding edition for CFP study from a tried and trusted team.

The book features research papers presented at the International Conference on Computer Networks and Inventive Communication Technologies (ICCNCT 2018), offering significant contributions from researchers and practitioners in academia and industry. The topics covered include computer networks, network protocols and wireless networks, data communication technologies, and network security. Covering the main core and specialized issues in the areas of next-generation wireless network design, control, and management, as well as in the areas of protection, assurance, and trust in information security practices, these proceedings are a valuable resource, for researchers, instructors, students, scientists, engineers, managers, and industry practitioners.

A comprehensive resource containing the operating principles and key insights of LTE networks performance optimization LTE Optimization Engineering Handbook is a comprehensive reference that describes the most current technologies and optimization principles for LTE networks. The text offers an introduction to the basics of LTE architecture, services and technologies and includes details on the key principles and methods of LTE optimization and its parameters. In addition, the author clarifies different optimization aspects such as wireless channel optimization, data optimization, CSFB, VoLTE, and video optimization. With the ubiquitous usage and increased development of mobile networks and smart devices, LTE is the 4G network that will be the only mainstream technology in the current mobile communication system and in the near future. Designed for use by researchers, engineers and operators working in the field of mobile communications and written by a noted engineer and experienced researcher, the LTE Optimization Engineering Handbook provides an essential guide that: Discusses the latest optimization engineering technologies of LTE networks and explores their implementation Features the latest and most industrially relevant applications, such as VoLTE and HetNets Includes a wealth of detailed scenarios and optimization real-world case studies Professionals in the field will find the LTE Optimization Engineering Handbook to be their go-to reference that includes a thorough and complete examination of LTE networks, their operating principles, and the most current information to performance optimization.

Terry returned from Saudi Arabia in the May of 1978 after a year in the Kingdom, with a spring in his step and overflowing with enthusiasm, feeling that he could secure a job using the experience he had gained during his time in operations engineering in the Eastern Province of Saudi. Having cut his teeth in a demanding environment and coming out the other end full of ambition to move on in the Petroleum industry and how soon he was to discover it was not to be as easy as he first thought. Experiencing an educational system of the 50's and the inadequacies of that system made Terry realise at an early age that things don't come simple and if you really want something then you had better be prepared to work hard to get it. Coming back from Saudi Arabia after soaking up so much experience in the petroleum industry he expected to walk into employment

without any problems. When that was not the case, it was like another wakeup call and reasserted what Terry had previously experienced, that nothing comes without an inner drive from yourself to make it happen. Originally his wife and himself had agreed that he would work in Saudi Arabia for two years but at the end of the first year and in the fifth week of his six weeks leave period after which Terry was supposed to return, they realised that neither relished the idea of being apart from each other and Terry being away from his family for another year. He was only too willing to agree that he needed to seek work nearer home and so the search began in July 1978. After many interviews and rejected contracts he finally found his dream job in the North Sea Petroleum industry and his career takes off with an engineering construction company he remained with for over thirty years. The book tells of the projects and people he was engaged with including many adventures and events that transpired over the span of his career.

This is a 'how to do it', practice-centred book, providing workable educational strategies to assist busy practitioners supervise and support the learning and assessment of learners during clinical placements, to achieve valid and reliable assessments. All strategies are underpinned by a solid theoretical and evidence base. The complexity and challenges of mentoring, learning and assessing in the clinical setting are specifically addressed. particular focus on the management of the non-achieving and failing student, with reference to extensive, recent work on mentoring, learning and assessment of clinical practice critical exploration of professional accountability and associated legal ramifications surrounding learning and assessment of clinical practice detailed consideration of how to use a model for learning from experience as a framework to facilitate experience-based learning extensive reference to the legislation, standards and guidelines on pre-registration health care education published by the Nursing and Midwifery Council (NMC) and the Health and Care Professions Council (HCPC) additional material on the monitoring and assessment of professional conduct and behaviours. direct reference to the mentoring and assessment of health care students in professions regulated by the Health and Care Professions Council (HCPC) reference to the Disability Act of 2010, and more detailed discussion on how to meet the needs of students with special needs, in particular students with dyslexia new appendix providing a comprehensive list of professional behaviours for assessment.

Now in its 6th edition, this trusted reference for nursing students supports the development of safe, effective and person-centred practice. The text has been comprehensively revised by nursing leaders and experts from across the spectrum of clinical practice, education, research and health policy settings; and a highly experienced editorial team, which includes Jackie Crisp, Clint Douglas, Geraldine Rebeiro and Donna Waters. Chapters of Potter & Perry's Fundamentals of Nursing, 6e engage students with contemporary concepts and clinical examples, designed to build clinical reasoning skills. Early chapters

introduce frameworks such as Fundamentals of Care and cultural safety, as ways of being and practising as a nurse. These frameworks are then applied in clinical and practice context chapters throughout. Reflection points in each chapter encourage curiosity and creativity in learning, including the importance of self-care and self-assessment. 79 clinical skills over 41 chapters updated to reflect latest evidence and practice standards, including 4 new skills Fully aligned to local learning and curriculum outcomes for first-year nursing programs Aligned to 2016 NMBA Registered Nurse Standards for Practice and National Safety and Quality Health Service Standards Easy-to-understand for beginning students Focus on person-centred practice and language throughout 44 clinical skills videos (including 5 NEW) available on Evolve, along with additional student and instructor resources Accompanied by Fundamentals of nursing clinical skills workbook 4e An eBook included in all print purchases Additional resources on Evolve:

- eBook on VitalSource Instructor resources: Testbank Critical Reflection Points and answers Image collection Tables and boxes collection PowerPoint slides Students and Instructor resources: 44 Clinical Skills videos Clinical Cases: Fundamentals of nursing case studies Restructured to reflect current curriculum structure New chapters on end-of-life care and primary care New online chapter on nursing informatics aligned to the new National Nursing and Midwifery Digital Health Capabilities Framework, including a new skill and competency assessment tool

A Nursing Survival Guide

English for Nurses

The field of health is an increasingly complex and technical one; and an area in which a more multidisciplinary approach would undoubtedly be beneficial in many ways. This book presents papers from the conference 'Health - Exploring Complexity: An Interdisciplinary Systems Approach', held in Munich, Germany, from August 28th to September 2nd 2016. This joint conference unites the conferences of the German Association for Medical Informatics, Biometry and Epidemiology (GMDS), the German Society for Epidemiology (DGEpi), the International Epidemiological Association - European Region, and the European Federation for Medical Informatics (EFMI). These societies already have long-standing experience of integrating the disciplines of medical informatics, biometry, epidemiology and health data management. The book contains over 160 papers, and is divided into 14 sections covering subject areas such as: health and clinical information systems; eHealth and telemedicine; big data

and advanced analytics; and evidence-based health informatics, evaluation and education, among many others. The book will be of value to all those working in the field of health and interested in finding new ways to enable the collaboration of different scientific disciplines and the establishment of comprehensive methodological approaches.

'The Clinical Placement' is a survival tool for nursing students and those that support them throughout their clinical learning journey: mentors, facilitators, academics, clinical partners and registered nurses.

Content Description #Includes bibliographical references and index.

This extensively updated second edition of LTE Signaling, Troubleshooting and Performance Measurement describes the LTE signaling protocols and procedures for the third generation of mobile communications and beyond. It is one of the few books available that explain the LTE signaling messages, procedures and measurements down to the bit & byte level, and all trace examples are taken for a real lab and field trial traces. This book covers the crucial key performance indicators (KPI) to be measured during field trials and deployment phase of new LTE networks. It describes how statistic values can be aggregated and evaluated, and how the network can be optimized during the first stages of deployment, using dedicated examples to enhance understanding. Written by experts in the field of mobile communications, this book systematically describes the most recent LTE signaling procedures, explaining how to identify and troubleshoot abnormal network behavior and common failure causes, as well as describing the normal signaling procedures. This is a unique feature of the book, allowing readers to understand the root cause analysis of problems related to signaling procedures. This book will be especially useful for network operators and equipment manufacturers; engineers; technicians; network planners; developers; researchers; designers; testing personnel and project managers; consulting and training companies; standardization bodies.

Quality Management in Intensive Care

[After payment, write to & get a FREE-of-charge, unprotected true-PDF from: Sales@ChineseStandard.net] This Standard specifies the technical requirements for manual wastewater monitoring such as the development of monitoring scheme, sampling points, monitoring sampling, sample preservation, transportation and handover, monitoring items and analytical methods, monitoring data processing, quality assurance and quality control.

Healthcare information technologies are now routinely deployed in a variety of healthcare contexts. These contexts differ widely, but the smooth integration of IT

systems is crucial, so the design, implementation, and evaluation of safe, effective, efficient and easy to adopt health informatics involves careful consideration of both human and organizational factors. This book presents the proceedings of the Context Sensitive Health Informatics (CSHI) conference, held in Copenhagen, Denmark, in August 2013. The theme of this year's conference is human and sociotechnical approaches. The Human Factors approach is distinctly design-driven and aims to optimize performance, safety and users' sense of well-being associated with their use of a system through the application of user-centered systems design and evaluation. The papers and presentations included here are grouped under the topics: patients and IT; usability test and evaluation; work tasks and related contexts; human factors and simulation; and context and systems design, and outline theories and models for studying contextual issues and insights related to how health information technologies can be better designed to accommodate different healthcare contexts. Healthcare organizations, health policy makers and regulatory bodies globally are starting to acknowledge this essential role of human and organizational factors for safe and effective health information technology. This book will be of interest to all those involved in improving the quality of healthcare worldwide.

This book is one of the first to comprehensively summarise the latest thinking and research in the rapidly evolving field of quality management in intensive care. Quality indicators and outcome measures are discussed with a practical focus on patient-centred, evidence-based implementation for safer and more effective clinical practice. Chapters on topics such as teambuilding, patient satisfaction, mortality and morbidity, and electronic management systems are organised into three sections, covering quality management at the scale of the individual patient, the intensive care unit, and the national and international level. Written by a team of over forty international experts in the specialty, with editors who have been heavily involved for many years with the European Society of Intensive Care Medicine, the book reflects commonly accepted goals and guidelines for best practice, and will be valuable for practitioners worldwide. The ideal one-stop resource for intensive care physicians as well as ICU and hospital managers. Global Advancements in Connected and Intelligent Mobility: Emerging Research and Opportunities
