"The book compares the
1954-79 labour

productivity record of
five expanding public
sector industries to that
of 24 expanding, capital
intensive, mass-
production industries in
the British private
sector. The author
shows that the public
sector industries' labour
productivity growth was

significantly faster than that of the private sector industries. Strikingly, he also finds that the state-owned industries were narrowing their productivity gap with their US counterparts at a significantly faster rate than the private sector industries. Dr.

Iordanoglou concludes that it is possible that public ownership had -

for Introductory
Statistics guides
students through
the basics of R,
helping them
overcome the
sometimes steep
learning curve.
The author does
this by breaking

the material down
into small, task-

The second
edition maintains
the features that
made the first
