Every year, as soon as reports on global economic inequality remind us about the direction our civilization is heading, there is a hysterical reaction, but hysteria dies down within weeks and we go back to the lifestyle that brought us here today. Often the blame is laid on the Millennial generation for their “apathy,” “lust for comfort,” and “bratty” attitude. Yet, business insider surveys indicate it's the same Millennial generation that overwhelmingly cares for the state of the world and the direction in which our civilization is heading. Nearly 50% of them ranked climate change and destruction of nature as their primary concern. This is followed by concern for war and global conflict, and then global economic inequality. The vast majority of those surveyed are willing and eager to make lifestyle changes. This book breaks open the hypocrisy of our civilization and stops the blame game in its tracks and identifies the root causes of today's world economy, ecology, and global politics. The book demonstrates that changes in lifestyle are necessary but not sufficient. No economic policy or technology development mode has a chance to survive, let alone thrive unless supported by the political establishment. In this process, the government plays a pivotal role. The challenge is to change the attitude of the government from a ‘self-serving’ controlling mode to a representative philanthropic mode. This new system of economic development and political governance is inspired by a long-forgotten understanding of political economics: medieval Islamic economics. In reviewing the history of economics from trade, currencies, and interest, the strengths and weaknesses of various economic developments over our centuries are evaluated. Based on the historical analysis, a step by step procedure is outlined for this fundamental change in our society today. As a whole, this book is the first of modern era to offer such a comprehensive analysis, complete with solutions to the entire crisis of today's civilization. Whether for the student, engineer in the field, economist, or even layperson interested in the subject, this groundbreaking new work is a must-have. Covering one of the most important subjects in our world today, it is a valiant attempt at solving one of the biggest problems facing all of us.

In order to understand the dramatic events of 1989 it is necessary to examine the circumstances leading up to them. The Polish Economic Crisis examines the primary factor. The author analyses how the severe recession of the late 1970s and early 1980s intensified the need for economic reform and resulted in the economic slump of the 1980s. Batara Simatupang concentrates on the effects of this period on the Polish people that proved to be a major pre-condition for the revolution of 1989 and influenced events in Eastern Europe as a whole.

The Little Black Book of Innovation, With a New Preface

The secret to making the right call in an increasingly complex world The decisions we make every day – frequently automatic and incredibly fast – impact every area of our lives. The Little Black Book of Decision Making delves into the cognition behind decision making, guiding you through the different ways your mind approaches various scenarios. You'll learn to notice that decision making is a matter of balance between your rational side and your intuition – the trick is in honing your intuition to steer you down the right path. Pure reasoning cannot provide all of the answers, and relying solely on intuition could prove catastrophic in business. There must be a balance between the two, and the proportions may change with each situation. This book helps you quickly pinpoint the right mix of logic and 'gut feeling,' and use it to find the best possible solution. Balance logic and intuition in your decision making approach Avoid traps set by the mind's inherent bias Understand the cognitive process of decision making Sharpen your professional judgement in any situation Decision making is the primary difference between organisations that lead and those that struggle. The Little Black Book of Decision Making helps you uncover errors in thinking before they become errors in judgement.

Innovation transforms companies and markets. It's the key to solving vexing social problems. And it makes or breaks professional careers. But for all the enthusiasm the topic inspires, the practice of innovation - how to do it-has remained stubbornly impenetrable. No longer. In The Little Black Book of Innovation, leading thinker Scott D. Anthony draws from research, Innosight fieldwork with global giants such as Procter & Gamble, and personal experience launching and investing in start-up companies to demystify the discipline of innovation. With wit and remarkable insight born of years of both leading and teaching innovation, Anthony presents a simple definition of the concept, breaks down the essential differences between its various types, and illuminates its vital role in organizational success and personal growth.

This Little Black Book is your companion for Lent 2015. It's an old-fashioned "vade mecum" (pronounced vahday maykum). That's Latin for "travel with me" and was used to describe a book that was a constant

companion – perhaps a condensed book of prayers for traveling priests, or a handbook for quick reference – something you could take with you anywhere. The right-hand pages walk through Luke’s passion narrative, a few verses at a time, with explanations and reflections along the way. It’s an ancient way of praying the Scriptures – called lectio divina. The left-hand page has a variety of quotes, information, and timely thoughts. Treat it like a buffet table from which you can take what you like. (If pressed for time, go directly to the right-hand page and spend your time there.) On Sundays and on various left-hand pages, we’ll especially call to mind the poor this Lenten season, remembering Pope Francis’ words that “(a)mong our tasks as witnesses to the love of Christ is that of giving a voice to the cry of the poor.” We won’t start reading the Gospels until Ash Wednesday. But we’ll start the six-minute program on Sunday, February 15 (the Sunday before Ash Wednesday), which will give us three days to get ready for Lent.

The Little Black Book 2 is the second installment of "The Little Black Book's" Millennial series. By focusing on the socio-economic mind frame of the black millennial female, this book intends to shatter the stereotypes attributed to the black woman. Drawing on a lifetime of distinguished work in economic research and policymaking, Andrew Kamarck details how his profession can more usefully analyze and solve economic problems by changing its basic approach to research. Kamarck contends that many economists today strive for a mathematical precision in their work that neither stems from nor leads to an accurate view of economic reality. He develops elegant critiques of key areas of economic analysis based on appreciation of scientific method and knowledge of the limitations of economic data. Concepts such as employment, market, and money supply must be seen as local, not exact. Measurement of national income becomes highly problematic when taking into account such factors as the so-called underground economy and currency differences. World trade analysis is based on inconsistent and often inaccurate measurements. Subtle realities of the individual, social, and political worlds render largely ineffective both large-scale macroeconomics models and micro models of the consumer and the firm. Fashionable cost-benefit analysis must be recognized as inherently imprecise. Capital and investment in developing countries tend to be measured in easy but irrelevant ways. Kamarck

concludes with a call for economists to involve themselves in data collection, to insist on more accurate and reliable data sources, to do analysis within the context of experience, and to take a realistic, incremental approach to policymaking. Kamarck's conclusions are shared by many economists, and his eloquent presentation will be essential reading for his colleagues and for those who use of economic research.

Darfur's Sorrow is the first general history of Darfur to be published in any language. The book surveys events from before the founding of the Fur sultanate in the sixteenth century through the rise and establishment of the Fur state and its incorporation into the Anglo-Egyptian Sudan in 1916. The narrative continues with detailed coverage of the brief but all-important colonial period (1916–1956) and Darfur's history as a neglected peripheral region since independence. The political, economic, environmental, and social factors that gave rise to the current humanitarian crisis are discussed in detail, as are the course of Darfur's rebel brutal suppression by the Sudanese government, and the lawless brigands known as janjawid. The second edition of the book brings the story up to date and includes an analysis of attempts to save Darfur's embattled people and to bring an end to the fighting.

The Little Black Book of Business Writing is for everyone who writes for business purposes, in the commercial world, the private sector, the trades and the professions. Mark Tredinnick and Geoff Whyte help readers write the kinds of documents that confront them most days at work - letters, emails, web writing, reports, minutes, tenders, ministerials, board papers, media releases, newsletters, marketing documents, policy proposals, business cards, newsletters, position descriptions, job ads, notes to financial statements, instruction and safety manuals, speeches, presentations and various kinds of technical papers. The Little Black Book of Business Writing helps people write at work with economy, impact and efficiency.

The time has come for a realistic political dialogue between the American national minorities and the dominant Anglo-American ethny. The problematic that arises in what American presidents Clinton and Obama have repeatedly called a "one-nation one-state" political system is: how will the state assure and protect the unique needs and interests of its minorities, particularly its historically oppressed national minorities? All black officials in the United States government are in the same position as the president; they are required to represent first of all the majority's interests. For a national minority to be able to fully address its special needs (when it can find no specific representation in the majority-dominated platform of either political party or the policy agenda of government), it must seek to enjoy the full range of human and civil rights,

particularly the right to self-determination. Hajji Malik Al-Shabazz understood that the African Americans were still in the grip of American domestic colonialism. He feared that the majority ethny would prefer to commit the violation of forced assimilation leading possibly to ethnocide rather than to negotiate collective equal-status integration with the African American national minority. As the presidency of Barack Obama is demonstrating, electing a Black president who is required to address the state's interest as a whole is not the answer for improving the well being of African Americans. The book contains thirty original articles dealing with important aspects of theoretical as well as applied economic theory. While the principal focus is on: the computational and algorithmic nature of economic dynamics; individual as well as collective decision process and rational behavior, some contributions emphasize also the importance of classical recursion theory and constructive mathematics for dynamical systems, business cycles theories, growth theories, and others are in the area of history of thought, methodology and behavioural economics. The contributors range from Nobel Laureates to the promising new generation of innovative thinkers. This volume is also a Festschrift in honour of Professor Kumaraswamy Vela Velupillai, the founder of Computable Economics, a growing field of research where important results stemming from classical recursion theory and constructive mathematics are applied to economic theory. The aim and hope is to provide new tools for economic modelling. This book will be of particular appeal to postgraduate students and scholars in one or more of the following fields: computable economics, business cycles, macroeconomics, growth theories, methodology, behavioural economics, financial economics, experimental and agent based economics. It might be also of importance to those interested on the general theme of algorithmic foundations for social sciences.
