The past ten years in South Africa has seen many changes in education - the creation of a single department of education; common examinations for all learners in public schools in the country, a new outcomes based education curriculum which was introduced to learners in the general education and training phase since 1998 and will be introduced to the further education and training phase from 2006. To evaluate the success of these changes South African researchers still use the indicator of student achievement. The matriculation examination is the visible, high profile and public

performance indicator. Every year parents, learners, teachers, researchers, government officials, policymakers, and the general public get involved in the debate around the matric examination with the most frequently asked questions being - Did the pass rate go up? Are standards dropping? Are the results real or have they been manipulated? How is our education system doing? Are we meeting the development goals? What should the matriculation examination of the future look like? participants from government (national and provincial),

Colloquium Proceedings

How does one become a professional? This interdisciplinary collection offers new insights into that fundamental question. Employing a wide variety of approaches and methodologies, the original and thematically linked essays discuss such problematic issues as the most appropriate site for professional education, the proper focus and content of the initial and on-going preparation of professionals, and the nature

of both continuity and change in professional education. In the process, they raise challenging questions about the development of professional education in Canada and elsewhere from the early 19th century to the present day, in fields as diverse as the health sciences, law, engineering, social work, theology, and university teaching. An essential resource for those studying the professions, this book will also appeal to practitioners, professional associations, administrators, and faculty in professional schools, and to all those interested in the past, present, and future state of their professions.

**This longitudinal,
qualitative, multi-case
study examines the
mathematical experiences
of three Bahamian students
pursuing science degrees in
American universities and
its relationship to their
previous mathematical
experiences in their
Bahamian high schools.
Drawing on cultural
psychology and**

sociocultural theories of learning, this study found that the relationship between the academic preparedness of the participants on their experiences with collegiate mathematics is not limited to subject content only. The lessons learnt from the implied curriculum also play a role in their experiences with collegiate mathematics. Of the three participants, two have had to learn/develop techniques for studying because they had not been sufficiently challenged in their previous environments to do so.

Each of the cases also highlights some powerful constructs needed for success in mathematics and at least two emphasize making connections between concepts, procedures, manipulatives/tools and multiple approaches when solving problems. This study contributes to an emerging area of research on student persistence in college-level mathematics courses as well as to the ongoing discussions in mathematics education regarding the role/importance of

conceptual understanding and how to promote it. The study makes visible some of the ways in which students' post-secondary experiences with mathematics are shaped by their perception of their mathematical preparation, thus providing a basis for discussions of possible curricular change in the Bahamas. It also suggests that issues such as confidence and school/teacher expectations of students may play a role in the development of conceptual understanding.
