*Moishe Postone undertakes a fundamental reinterpretation of Karl Marx's mature critical theory. He calls into question many of the presuppositions of traditional Marxist analyses and offers new interpretations of Marx's central arguments. He does so by developing concepts aimed at grasping the essential character and historical development of modern society, and also at overcoming the familiar dichotomies of structure and action, meaning and material life. These concepts lead him to an original analysis of the nature and problems of capitalism and provide the basis for a critique of 'actually existing socialism'. According to this new interpretation, Marx identifies the core of the capitalist system with an impersonal form of social domination generated by labor and the industrial production process are characterized as expressions of domination generated by labor itself and not simply with market mechanisms and private property. Proletarian labor and the industrial production process are characterized as expressions of domination rather than as means of human emancipation. This reinterpretation entails the form of economic growth and the structure of social labor in modern society to the alienation and domination at the heart of capitalism. This reformulation, Postone argues, provides the foundation for a critical social theory that is more adequate to late twentieth-century capitalism.*

*This book is written to help human service program administrators either in terpret or conduct program evaluations. Our intended audience includes admin istrators and those students being trained for careers in human services administration. Our focus is on persons interested in assessing programs in which people work with people to improve their condition. The book's title, Program Evaluation: A Field Guide for Administrators, describes how we hope you use this book—as a tool. In writing the book, we have attempted to meet the needs of persons who have to conduct program evaluations as well as those who must use those evaluations. Hence, we have attempted to make the book "user friendly." You will find, for example, numer ous guidelines, cautions, and specific suggestions. Use the book actively. Our primary motive is to help administrators make better decisions. In fact, the primary reason for program evaluation is to help program administrators make good decisions. These decisions often must balance the goals of equity (or fairness in the distribution of goods and services among people in the economy), efficiency (obtaining the most output for the least resources), and political feasi bility.
