For over 50 years, the mission of the National Institute of Allergy and Infectious Diseases (NIAID) has been to conduct and support basic and applied research to better understand, treat, and prevent infectious, immunologic, and allergic diseases with the ultimate goal of improving the health of individuals in the United States and around the world. As part of its mission to foster biomedical discovery and to reduce the burden of human disease, NIAID is committed to encouraging the accelerated translation of biomedical discoveries into effective clinical care and public health practice throughout the world. In pursuit of this goal and its disease-specific scientific objectives, NIAID seeks to broaden research opportunities and collaborations involving scientists and institutions outside the United States. National Institute of Allergy and Infectious Diseases, NIH: Volume 1, *Frontiers in Research* contains presentations given at the 2006 NIAID Research Conference held in Opatija, Croatia which brought internationally known researchers from the United States and Central and Eastern Europe to focus together on shared interests in microbiology, infectious disease, HIV/AIDS, and basic and clinical immunology. Some of the topics covered include emerging and re-emerging infections, the development of infectious disease prophylactics and therapeutics, drug resistance, and various topics in immunomodulation, autoimmunity, infections and immunity, and the development of vaccines. Extensive and in-depth, National Institute of Allergy and Infectious Diseases, NIH: Volume 1, *Frontiers in Research* is a valuable, comprehensive guide to the state of research today.

Plant diseases cause yield loss in crop production, poor quality of produce, and great economic losses as well. Knowledge of the perpetuation and spread of the pathogens and various factors affecting disease development is an important need. Disease diagnosis is the prime requirement for determining preventive or curative measures for effective disease management. This new 2-volume set, Diseases of Field Crops, helps to fill the need for research on plant diseases, their effects, how they spread, and effective management measures to mitigate their harmful consequences. The volumes in this set showcase recent advances in molecular plant pathology and discuss appropriate diagnostic techniques for identification of causal agents and diseases, providing the information necessary to establish management strategies. The chapters in these two volumes include detailed description of symptoms, causal organisms, disease cycles, epidemiology, and management techniques of economically important diseases. The volumes explore existing strategies and offer new methods that can be used in an integrated manner and with a comprehensive approach for the management of major diseases of the field crops. Also taken into consideration is the impact of global climate change on the spread and severity of plant diseases. This volume covers pulses, oil seeds, narcotics, and sugar crops. Each of the chapters focuses on one crop, with a detailed account of symptoms, causal organisms, disease cycles,

epidemiology, and management of the diseases caused by fungi, bacteria and viruses. Some crops discussed include green gram, chickpeas and peas, lentils, soybeans, groundnuts, sunflowers, sugarcane, tobacco, and others. Volume 1 focuses on cereals, small millets, and fiber crops.

An accessible and comprehensive guide, "Practical Pigeon Production" will be of utility to anyone occupied in keeping pigeons for economic gain, and would make for a useful addition to collections of allied literature. Many vintage books such as this are becoming increasingly rare and expensive. We are republishing this volume now in an affordable, modern, high-quality edition complete with a specially commissioned new introduction on pigeons.

Excerpt from Pigeon Diseases: With a Chapter on Feeding This treatise on pigeon diseases and feeding management is published in response to many inquiries which have reached the office of Pigeons & Pigeon Flying for information upon the various phases of this subject. In the routine of answering these inquiries, it has been found that no one book heretofore has covered this subject, and much time has been consumed in searching through various pamphlets and, in some cases making inquiries among veterinarians and physicians seeking for remedies and treatments for specific diseases. From this experience the author has been persuaded to compile this information and place it before the pigeon public in the present form in the hope that it will promote the cause of pigeon keeping by lessening the losses, as well as relieving many of our pets from unnecessary suffering. On account of the multitude of sources from which this material has been gathered, it has been impossible to give full credit to the source of the information in every instance. In fact some of the physicians did not want to be quoted. But in cases where the information was obtained from other works, full credit has been given. Many of the remedies and treatments are original and all of such have been tested and tried in actual "fussing" with sick animals in the author's possession. This little work is offered to the pigeon fraternity in the hope that it will be a real benefit and, if any reader finds it lacking, it is desired that he report his experience to the author, to the end that supplements may be added containing information covering every possible phase of this subject. The Homing Pigeon

The Pigeon News

Originally published in 1907. One of the earliest and possibly the most important book ever published on homing pigeons. The well illustrated and detailed chapters include: The Columba Livia - Origin and Production - Lofts and Fittings - Food and Feeding - Interbreeding - Crossing - Mendel's Law Applied to Homing Pigeons - Founding a Loft - Some Physical Characters - Feathers and the Moults - The Homing Instinct - Training - Preparing for Old Bird races - Preparing for Young Bird Races, etc. Many of the earliest pigeon books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. Home Farm Books are republishing many of these classic works in affordable, high quality, modern editions, using the original text and artwork.

Pigeon Racing by Dr. Herbert R. Axelrod contains all the information that a budding fancier needs! Extract from the book: "There has probably been more written on feeding than on any other subject related to pigeons. This has always been the most controversial subject. This chapter will give you a general knowledge of what and how to feed. The importance of choosing the right food and feeding in the right way cannot be overemphasized. The fancier who learns to feed correctly will win his share of races. Food gives the elements for proper growth and fuel to nourish the body and produce heat and energy."

Dr. Hugh L. Moffet's popular handbook has now been thoroughly updated by two well-known specialists in pediatric infectious diseases. Organized by anatomic site of disease rather than by infectious agent, the book takes a problem-oriented approach to the diagnosis and treatment of infectious syndromes. It guides clinicians step by step through the process of classifying the illness, developing a differential diagnosis, establishing the definitive diagnosis, treating the patient, and anticipating and recognizing complications and life-threatening emergencies. This Fourth Edition has a greater focus on treatment and includes new chapters on HIV infection and AIDS and congenital immunodeficiency syndromes.
