Do your students ever struggle to grasp what exactly constitutes evidence or struggle to see how it applies to practice? Would you like them to feel more confident about critiquing evidence? The need for an evidence base for nursing practice is widely accepted. However, what constitutes evidence and how nurses might apply it to practice is not always clear. This book guides nursing students through the process of identifying, appraising and applying evidence in nursing practice. It explores a wide range differing sources of evidence and knowledge, and helps students to develop key skills of critiquing research and using evidence in clinical decision making.

Calling for a broader, new approach to social mobility research, Pathways to Social Class: A Qualitative Approach to Social Mobility moves beyond pure statistics to use qualitative techniques--such as life stories and family case studies--to examine more closely the dynamics of mobility and address more fundamental sociological questions. Up to now, the extensive sociological literature on mobility has been based around the survey method. As a result, we have access to abundant statistical data, but there is little information available to explain how and why people follow particular life paths. To overcome these limitations, Bertaux and Thompson have developed an alternative, complementary approach using life stories, case histories of whole families over several generations, or case

*studies of local communities. Employing the case-study approach does not prevent the identification of structural trends; on the contrary, it allows us to analyze those collective processes through their local effects, restoring the links with classics of sociological thought. Bertaux and Thompson tackle such problems as: What exactly is transmitted between generations; is it wealth or land, occupational models or skills, social networks, or values and orientations? What kinds of assets can immigrants draw on? How can a social elite survive the upheaval of a popular revolution? What is the impact of marriage on the mobility of men and women? How far can belonging to one locality rather than another, or choosing a particular house, shape mobility paths and aspirations? Do dreams of mobility matter? This volume promises to inspire other sociologists towards the richly revealing and highly significant findings that a broader-based-approach to social mobility will enable. Daniel Bertaux is the director of research at the Centre d'Etude des Mouvements Sociaux of the CNRS and EHESS in Paris. His many publications on social mobility and on life stories include *Destins Personnels et Structure de Classe* and *Biography and Society*. Paul Thompson is a research professor in sociology at the University of Essex. His books include *The Edwardians*, *The Voice of the Past*, *I Don't Feel Old*, and *The Myths We Live By*. His is co-editor with Bertaux of *Between Generations: Family Models, Myths and Memories*.*

Immanuel Wallerstein (who provided the foreword to these volumes) is probably the most prominent advocate of world-systems theory, but as this collection of 32 articles demonstrates, there are a number of advocates of this perspective within the American Sociological Association. Presented by Dunaway (sociology, Virginia Tech) the papers explore a number of issues of crisis and resistance to the structural system of global politics and economics and offer analyses designed to extend the scope of world systems theory to deal with issues of the environment, urbanization, and superpower hegemony. How to Critique Journal Articles in the Social Sciences, by Scott R. Harris, is a brief, introductory book that provides readers with a step-by-step guide to reading and understanding a social science research article. The author demonstrates the many strengths of social research, including its advantages over ordinary ways of knowing things, and, at the same time, points out that research is inevitably flawed. Rather than naively assuming that good research simply produces “The Truth” or cynically asserting that research is hopelessly biased and futile, this book instills in readers a critical perspective—one that appreciates the strengths and weaknesses of any piece of scholarship.

intended for advanced undergraduate and beginning graduate social work students in a one-semester research methods course. Since the first edition in 1981, this edition is designed to provide social work students with the basic methodological foundation they need in order to successfully complete more advanced research courses that focus on single-system designs or program evaluations. With its customarily straightforward user-friendly writing style by renowned educators, this edition will continue to maintain its notoriety as the premier social work research methods text. Thoroughly revised and updated, the chapters offer a wealth of new research examples and references, accessible diagrams of essential concepts and processes, and extended coverage of core social work research methods and recent developments. For example, with the inclusion of four new chapters on the evidence-based approach to social work practice, the book emphasizes how important this approach has become, and provides a rock-solid foundation for understanding how to evaluate and interpret research findings that have been derived from research studies-the minimal skills needed for evidence-based social work practitioners. The text is presented in chunks of approximately 10 True/False questions on specific concepts in research methodology and statistics. This is followed by clear explanations, from first principles, that assume no prior knowledge. This book is for the paper critique section of the MRCPsych 2 examination but clinical tutors, organisers of journal clubs and clinicians interested in research will find the book helpful.
