The Devil Is in the Details

Seeks to explain the causes of ambiguously worded state legislation. The level of detail in a given law can have dramatic consequences for how that law is interpreted and applied. In The Devil Is in the Details, Rachel VanSickle-Ward focuses on the dynamics of social policy construction in the United States in order to better understand why the wording of legislation can range from the specific to the ambiguous. When policies are high salience, the fissures produced by partisan discord, interest group diversity, and pluralistic executive branches promote ambiguous policy. When policies are lower profile, this relationship is more tenuous and, at times, inverted, with contention producing more policy detail. Put simply, on important and controversial legislation, ambiguity serves as a vehicle for compromise when key participants disagree over details. Moreover, fragmentation is a more powerful driver of ambiguity than limits in technical expertise or legislative capacity. This multi-method investigation is the first to measure statute specificity directly. VanSickle-Ward combines comprehensive content analysis of more than 250 health and welfare bills passed in 44 states in the 1990s and 2000s with in-depth interviews of policy-making elites.

Half the world's population is now urbanised and cities are assuming a larger role in debates about the security and sustainability of the global food system. Hence, planning for sustainable food production and consumption is becoming an increasingly important issue for planners, policymakers, designers, farmers, suppliers, activists, business and scientists alike. The rapid growth of the food planning movement owes much to the unique multi-functional character of food systems. In the wider contexts of global climate change, resource depletion, a burgeoning world population, competing food production systems and diet-related public health concerns, new paradigms for urban and regional planning capable of supporting sustainable and equitable food systems are urgently needed. This book addresses this urgent need. By working at a range of scales and with a variety of practical and theoretical models, this book reviews and elaborates definitions of sustainable food systems, and begins to define ways of achieving them. Four different themes have been defined as entry-points into the discussion of 'sustainable food planning'. These are (1) urban food governance, (2) integrating health, environment and society, (3) urban agriculture (4) planning and design. 'This is an important compilation on a timely topic. It brings together the work of planners and designers from both sides of the Atlantic, and challenges us to think about how to create food systems that deliver healthy, just, and sustainable communities and vital places. The book moves dexterously between the grassroots and policy halls and draws valuable lessons for theory and practice.' Dr. Kami Pothukuchi, Department of Urban Studies & Planning, Wayne State University 'To address the problems of urban food production we need to look at the city in a completely different way. This timely book will act as an important source for those who have an ethical interest, not only in food, but in improving the quality and justice of life in our city communities.' Prof. Flora Samuel, School of Architecture, University of Sheffield and member of Royal Institute of British Architects Research and Development Committee 'This publication provides a lot of "food for thought", not just for persons professionally involved in the food sector and officials dealing with national food policies, but especially for local and regional authorities, urban planners and architects, NGOs and community based organisations, health and environmental officers and concerned consumers. Against the background of the growing awareness of the elevated social, health and ecological costs of the mainstream globalized agri-food system, this book analyses the emergence of a new vision and many initiatives that seek to reconnect (sustainable) production with (sustainable) consumption .... Hence, the book delivers what is promised in its title: it discusses new concepts related to food and sustainable urban/regional planning based on a critical review of innovative practices at various levels.' Ir. Henk de Zeeuw, Director RUAF Foundation 'For those who work to address the future challenges facing city development, this book is a must. Why? Because today practitioners and professionals are being asked to understand urban food production within a social, economic and ecological context. This book shows us how these connections are being made. The chapters are accessible and fascinating and will help beginners and experts to deal with food production in their everyday work.' Dr. Carlo W. Becker, bgmr Landscape Architects Berlin/Leipzig and Technical University Cottbus

How colleges and universities can live up to their ideals of diversity, and why inclusivity and excellence go hand in hand. Most colleges and universities embrace the ideals of diversity and inclusion, but many fall short, especially in the hiring, retention, and advancement of faculty who would more fully represent our diverse world—in particular women and people of color. In this book, Abigail Stewart and Virginia Valian argue that diversity and excellence go hand in hand and provide guidance for achieving both. Stewart and Valian, themselves senior academics, support their argument with comprehensive data from a range of disciplines. They show why merit is often overlooked; they offer statistics and examples of individual experiences of exclusion, such as being left out of crucial meetings; and they outline institutional practices that keep exclusion invisible, including reliance on proxies for excellence, such as prestige, that disadvantage outstanding candidates who are not members of the white male majority. Perhaps most important, Stewart and Valian provide practical advice for overcoming obstacles to inclusion. This advice is based on their experiences at their own universities, their consultations with faculty and administrators at many other institutions, and data on institutional change. Stewart and Valian offer recommendations for changing structures and practices so that people become successful in ways that benefit everyone. They describe better ways of searching for job candidates; evaluating candidates for hiring, tenure, and promotion; helping faculty succeed; and broadening rewards and recognition.

In the past few years, the way we think about assessment has undergone a revolution. From the re-organisation of qualifications and examinations at national level (including removing National Curriculum levels at secondary school) to the increasing focus on active research to develop feedback strategies with a measurable impact, assessment has never been so much at the forefront of educational thought. While previously assessment was bound to the curriculum, now there is a demand for schools to develop

assessment systems that are merely driven by it. Despite raising serious questions and challenges, these dramatic changes provide a reason for teachers to evaluate their practice. Simultaneously, the nature of CPD has been reinvigorated in the 'digital age', with teachers galvanised by online resources, Twitter and educational blogs. The result? Teachers can take their development into their own hands, and re-professionalise teaching! Bringing together these two movements, this book provides an opportunity for teachers to grasp what formative assessment means, how it complements the curriculum when used effectively, how to employ it in their classroom and school, and how they can improve their assessment systems and practice within the classroom. Divided into two parts, train yourself and teach others, this book will dispel concerns, and help teachers and school leaders to embrace and excel in all areas of formative assessment!

Second language classrooms provide unique opportunities for intellectual growth, cognitive skill development, and cultural exchange. In Integrating the Digital Humanities into the Second Language Classroom, Melinda A. Cro makes the case for bringing the digital humanities (DH) into that sphere, strengthening students' language skills while furthering their critical thinking and research abilities. Written as a practical guide for language instructors new to DH, Cro addresses practitioners' most common questions: What are the benefits of DH for language learning in particular? How can DH be used at different levels of instruction? What types of DH tools are out there, and what kinds of knowledge must students and teachers bring to the table? Integrating the Digital Humanities into the Second Language Classroom is filled with real-world examples and concrete recommendations, making it an ideal introduction for language teachers intrigued by the potential of DH.

Die im Jahr 2000 wiederbegrundete Ostafrikanische Gemeinschaft (East African Community - EAC), der inzwischen neben den Grundungsmitgliedern Kenia, Tansania und Uganda auch Burundi, Ruanda und Sudsudan angehoren, hat sich das ambitionierte Ziel einer politischen Foderation gesetzt. Zugleich sind in der Integrationspraxis jedoch weitreichende Implementierungsdefizite hinsichtlich des auf regionaler Ebene erlassenen Rechts zu beobachten. Vor diesem Hintergrund untersucht Johannes Doveling, ob und inwieweit das rechtliche Regelungsregime der Ostafrikanischen Gemeinschaft dazu beitragen kann, die Integrationsziele zu erreichen. Dabei berucksichtigt er auch ausgewahlte europarechtliche Aspekte. Es tritt eine Wirtschaftsgemeinschaft zutage, die zwar der Europaischen Union ahnelt, allerdings keine nennenswerte Ubertragung von Hoheitsrechten vorsieht und sich damit im Ergebnis eher als Plattform fur intergouvernementale Kooperation zwischen den Mitgliedsstaaten darstellt.

Before God created the universe, it apears to some of us that he must have had to undertake a lot of planning. God planned for all his creation to be put together and operate through mechanics, electrical and magnetic fields, and forces. He designed and planned for tiny subatomic particles to attract and repel, spin and fly. His atomic model baffled us for thousands of years. Yet, he also planned for life and spiritual existance. Stephen E. Meeks speculates on all of God's planning in this important work, drawing on his knowledge of scripture and science. He seeks to discuss questions such as: What steps did God take to create life and achieve His plan of salvation? Did God keep some things a secret? What was he doing Before the creation? The author examines how God reveals his plan for a strong and orderly foundation on which He physically built creation and how His basic building blocks are revealed by science. From string theory and subatomic particles, light, day and night, and the heavens, to life, cellular mechanics, and more, this book hopes to share with you a new appreciation for God's amazing work.

The key to successful projects and products are the people behind them. Have you ever found yourself wondering how these thinkers and creators of the Web actually work, and how they tackle their projects? Where do they seek inspiration, and what are the lessons they have learned in the course of their careers? With the help of this eBook, we aim to focus on the people behind the names for a change. After all, what could be more insightful than giving them a chance to share their stories? The authors of this eBook had the occasion to sit down with experienced influencers and successful designers for a row of interviews in which they provide first-hand insights into their very own workflows, habits and strategies. WordPress co-founders Matt Mullenweg and Mike Little are among them, JavaScript evangelist Doug Crockford, IDEO's Duane Bray, Meetup's vice president Andres Glusman, as well as many other creative minds from design, UX and startup branches. Their insights and stories are not only truly inspiring, but also contribute to giving this fast-moving, tech-driven Web industry a more familiar face.
