Strategies for Teaching in a Diverse Society solves a crucial problem encountered by today's teacher educators: *How can we adequately prepare teachers to deal with the variety of students that they will teach? Lasley and Mieczynski are the first to successfully address the central question about how multicultural and diversity coverage can be incorporated into the instructional areas of education. Strategies for Teaching in a Diverse Society illustrates that attention to individual and cultural differences is a vital step to truly successful teacher preparation. It offers instructors great flexibility with actual teacher examples from all content areas for the elementary, middle, and secondary school levels. Explanations for each method of instruction are supported by a plethora of case studies, applicable diversity issues, evaluation criteria, and sample lesson plans.*

Becoming Literate in Mathematics and Science

What do chocolate chip cookies, chemistry and logic have in common? They are the basis for a unit that lets students become actively engaged in discovering the arrangement of the periodic table. This learning activity takes the periodic table out of the static presentation usually associated with textbooks and chemistry courses and interjects an element of discovery.

The two activities in this unit provide students with information that they have to arrange in organized charts. In the process of creating the arrangements, students will be involved in problem solving and will gain an appreciation for the scientific process of exploration and verification. This dynamic unit meets national science standards in seven teaching and content areas. Bring the periodic table to life with this hands-on, minds-on unit. Book jacket.
