through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received.

## Read Book

## Toshiba

## Disassembly

## Guide

Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date.

Overall, 79% of currently married nonsterile women reported using some type of family planning service during the

## Read Book

## Guide

previous 3 years. There were no statistically significant differences between white (79%), black (75%) or Hispanic (77%) wives, or between the 2 income groups. The 1982 survey questions were more comprehensive

## Read Book

## Toshiba

## Disassembly

than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits /1000 women.

Teenagers had the highest annual visit rate (1581/1000) of any age group for all sources of family planning

## Read Book

## Toshiba

## Disassembly

## Guide

services combined.

Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for black women
